

Phosphorus Reduction Scheme

Cross-slope hedgerow creation

Funding is offered for creating hedgerows planted across the slope to prevent soil erosion and field run-off, with the aim of improving downstream water quality. Hedgerows help stabilise field edges and banks, preventing the direct deposition of sediment and leaching of nutrients from land management, as well as improving infiltration and uptake of water helping to reduce flood risk. Hedgerows also deliver biodiversity benefits through creating a habitat for nature. Hedgerow creation already funded by any other environmental stewardship scheme (such as Countryside Stewardship) is not eligible.

Length of agreement available

- 10 years from planting. This is the minimum period of time that the hedge should be kept and maintained but please note that the hedgerow will be provided with ongoing protection under the Hedgerow Regulations 1997.

Where to use this measure

- Across slopes where creation would reduce soil erosion and run-off
- Where grass buffers alone are not likely to reduce run-off
- Where creation would extend or link existing hedgerows
- In fields that are farmed intensively or semi-intensively i.e. only fields that receive manure/fertiliser and/or are grazed intensively or semi-intensively. Rough grazing and conservation grazing is ineligible.

Where this measure cannot be used

- **Do not** use this option:
 - to replace an existing hedgerow
 - on historic or archaeological features
 - on a site where a hedge has previously received a grant in the past 10 years
 - on fields which are considered as low input or used for rough grazing or conservation grazing
 - for fields that have been funded by any other funding scheme (such as Countryside Stewardship)

Hedgerow creation cannot be funded in situations where the management of the field is in breach of the Farming Rules for Water or Nitrate Vulnerable Zone rules (if applicable). Successful applicants are required to sign the declaration described in the record keeping section below.

Important considerations

- Once the decision has been made to establish a hedge, there is no minimum or maximum distance that the hedge needs to be positioned from the watercourse, however aesthetics and accessibility should be considered, as well as soil conditions for successful establishment.

Requirements

- Retain the hedge in its original location for at least 10 years from the agreement start date. This is the minimum period of time that the hedge should be kept and maintained but please note that the hedgerow will be provided with ongoing protection under the Hedgerow Regulations 1997.
- Plant hedge between 1st November and 31st March
- Establishment:
 - Prepare a 1.5m wide strip to provide good soil conditions and to help reduce competition from other vegetation
 - Apply any herbicide to the 1.5m strip in the August or September prior to planting only, following product guidance and taking appropriate precautions not to pollute any adjacent watercourse
 - If planting on a bank, place plants just off the crest of the bank to avoid drying out
 - Plants must be 2-year-old transplants and at least 45cm to 60cm high
 - For small-moderate flow pathways, plant each plant 30-45cm apart in two staggered rows, each row approximately 45cm apart
 - For larger flow pathways, plant each plant 20 – 30cm apart in three staggered rows, each row approximately 20 – 30cm apart
 - Choose locally occurring and native species from an approved supplier of UK Provenance stock, with no one species making up more than 70% of the total mix
 - Protect with (preferably biodegradable) tree guards to protect the plants for the first two to three years of establishment
- Maintenance:
 - Keep planting strip clear of weeds until hedges have established, by cutting vegetation not spraying
 - Remove guards when plants have established
 - Replace any dead plants the following planting season
 - Trim the hedge within the first two years to encourage thickened growth
 - Where fields are grazed, fence off new hedge to prevent grazing animals from damaging the hedge
 - If possible, water hedge plants during dry summers

Consents and permits

- The Environment Agency should be consulted on all hedgerow creation along designated 'main river' locations as consent may be needed in these circumstances. If your land lies on the floodplain you will also need to talk to the local Internal Drainage Board before creating hedgerows.
- Hedgerow creation should be avoided on sites of archaeological or historic importance. You should ensure you have any relevant consents before carrying out the work in such circumstances. Visual intrusion and impacts on landscape character should also be considered in the construction and alignment of a new hedge line, particularly in designated landscapes or historic parkland.
- In wetland Sites of Special Scientific Interest (SSSI) and other priority habitat areas such as county wildlife sites, the grazing of ditch banks and riparian grazing marsh is often essential to maintain the ecological interest of the site. Natural England will not issue a consent for hedging on a designated site (SSSI etc) where this is considered detrimental to the conservation objectives.

- Inform the Rural Payments Agency if planting new hedges splits one existing field parcel into separate fields.

Restrictions

- **Do not** block or restrict access to open access land or obstruct public rights of way.
- **Do not** do any work, including hedge trimming or laying, which might harm nesting birds or destroy their nests. The main nesting and breeding season is from 1st March to 31st August.

Record keeping and payment terms

Agreement holders will need to keep the following records and supply them with *the payment claim*. Payment will only be made upon satisfactory receipt of all of the following records:

- Photographs of the site before the new hedge is planted
- Photographs of each newly planted hedge line
- Soil analysis results (pH, P and K as a minimum) for the relevant fields dated within the past 3 years.
- Farm and field information needed to run a phosphorus loss tool for the farm and calculate the reduction in phosphorus loss to water arising from this work. This will include farm data relating to livestock numbers, cropping areas and fertiliser / manure inputs.
- Self-declaration that the terms of the project agreement have been adhered to (*key terms are listed above*).
- Successful applicants are required to sign a declaration confirming that:
 - reasonable precautions are taken to prevent nutrients and soil from the relevant field entering watercourses or from being leached to groundwater - to an extent that could cause pollution.
 - the relevant fields have not been (i) the source of a recorded pollution incident which could have been prevented by the farmer taking reasonable precautions to prevent that pollution and/or (ii) the subject of a warning, fine, prosecution or BPS deduction issued to the farmer by the Environment Agency or RPA for a breach of NVZ rules or Farming Rules for Water in the past 5 years.
- It is expected that to support and inform the above declaration, successful applicants will complete the Environment Agency's Agricultural Compliance Tool (ACT) by 31st December in each year of the agreement and submit it when completed to Wessex Water (who will hold it in confidence) and address any actions identified by the ACT. For agreements involving annual payments of more than 5 years duration and/or with a value in excess of £5,000 of annual payments, this is a requirement.
- Agreement holders are required to complete a Wessex Water supplier application form in order to receive their first payment. A copy of this is available on the scheme website.
