Affordability and Acceptability Testing

Interim report on Qualitative research for Wessex Water

31st May 2023

FOR YOU. FOR LIFE.

Wessex Water

YTL GROUP

BLUE MARBLE

The economic situation is sitting heavily with customers. Most say they are 'just getting by' or 'struggling'- with widespread pessimism that the situation is worsening. In terms of domestic finances, the squeeze is not necessarily hitting the water bill yet with most saying they find it neither easy nor difficult to pay.

Customers are surprised and shocked by the extent of the bill increases associated with the proposed plan. These are unexpected and it is not obvious why such a burden is falling to bill payers. At a time of economic uncertainty, the research raises questions and challenges about what customers should be expected to pay for. Smart meter roll out is the most contentious part of the plan.

Overall most customers opt for the proposed plan and they accept the need for important improvements especially where these relate to reversing environmental damage, reducing leakage and pollution. There is support for Wessex Water to go further in its leakage and pollution targets. Most trust Wessex Water to deliver some or all of the proposed plan.

However a significant minority choose the 'must-do' plan, even though the cost difference relative to the proposed plan is seen as small. Most support is for the delay of smart metering, omitting EVs from the carbon zero plans and eliminating water poverty over a longer timeframe (although affordability plans are seen as important, customers question whether the company or government should step in).

Affordability is constrained with the majority of this sample saying it will be difficult/very difficult to afford the proposed bill. There is a nuanced picture, however, with customers commenting on their willingness to pay for investments that they may not accept as opposed to their inability to pay.

3 x 3hr face-to-face deliberative events

Stage 1: Participants to go through pre-read pack and fill out pre-task survey

Stage 2: Participants to attend 1 x 3hr event each in person

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

Micro NHH

2 x 90min reconvened online focus groups

Stage 1: Participants to attend first 90 min focus group

Stage 2: Participants to attend second 90 min focus group

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

Larger NHH

8 x 1hr online video depth

Stage 1: Participants to go through pre-read pack and fill out pre-task survey

Stage 2: Participants to attend 1 x 1hr online depth

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

8 x 1hr online video depth

Stage 1: Participants to go through pre-read pack and fill out pre-task survey

Stage 2: Participants to attend 1 x 1hr online depth

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

Total sample achieved = 96/96

Household sample achieved = 48/48

- **SEG:** 13 x AB, 25 x C1C2, 9 x DE
- **Age:** 19 x under 45, 28 x over 45
- **Gender:** 25 x F, 22 x M
- **Metering:** 28 x metered, 12 x unmetered, 7 x don't know
- **Recruitment:** 38 x list opt ins, 8 x free find, 2 x extras

Economically vulnerable sample achieved = 8/8

- **Age:** 4 x under 45, 4 x over 45
- **Gender:** 5 x F, 3 x M
- **Metering:** 3 x metered, 5 x unmetered
- **Social tariff:** 3 x ST, 5 x eligible for ST
- **Recruitment:** 8 x free find

Health vulnerable sample achieved = 8/8

- **Age:** 2 x under 45, 6 x over 45
- **Gender:** 4 x F, 4 x M
- **Metering:** 3 x metered, 5 x unmetered
- **PSR status:** 4 x on PSR
- **Examples of vulnerability include:** mental health problems, physical health conditions, old age
- **Recruitment:** 4 list opt ins, 4 free find

Total number of responding to invitation letter: c180 opted in to participate

Future customer sample achieved = 8/8

- **SEG:** 3 x AB, 5 x C1C2
- **Age:** 8 x 18-30
- **Gender:** 5 x F, 3 x M
- **Recruitment:** 8 x free find

Non-household sample achieved = 26/26

- **Size:** 18 x micro NHH, 8 x larger NHH (over 10 employees)
- **Examples of business type include:** hairdressing, accountancy, plant nurseries, property maintenance
- **Usage type:** 22 x domestic, 4 x non-domestic
- **Usage volume:** 18 x low spend, 8 x high spend

The customer context

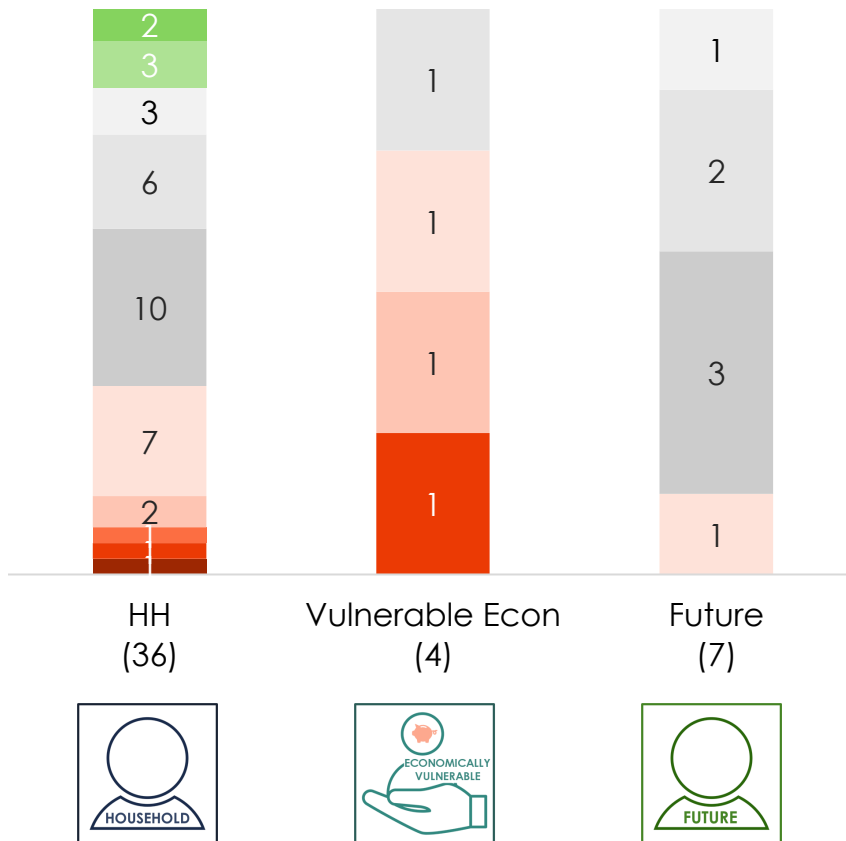

Views on current financial situation and financial outlook

- The majority of the domestic sample (31/47) said they fall somewhere between 'just getting by' and 'struggling' when it comes to household finances

FEELINGS ABOUT HOUSEHOLD FINANCES

- 10 - Thriving
- 9
- 8
- 7
- 6
- 5 - Just getting by
- 4
- 3
- 2
- 1
- 0- Struggling

"I have a new job with a relatively low income which barely covers my day to day expenses, and I also have debts to repay. I don't have money left over to save each month"
 HH Taunton Answer: 2/10

"Living on pensions with safety net of investments, mostly built on inherited assets"
 HH Salisbury Answer: 8/10

"Because, while I am making the bills each month, there is never any money to put aside."
 HH Bath Answer: 4/10

"I work full time on a well above average salary and my wife still had to go back to work after a few months of maternity just to make ends meet."
 HH Salisbury Answer: 3/10

Source: Pre task Appendix A, B/C, E: How do you feel about your household finances at this time?

Views on current financial situation and financial outlook

- Most (37/47) think the current economic situation is 'worsening'

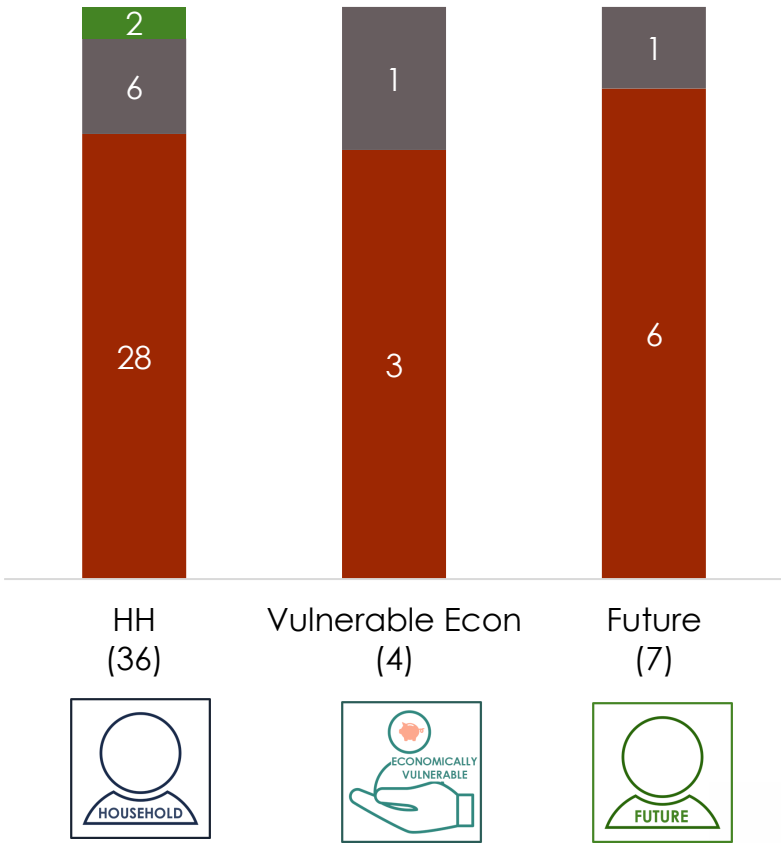

"The normal weekly shop is getting more and more expensive... some places are just using it as an excuse to make profit" HH Salisbury

"I have to think about the here and now." HH Salisbury

"The cost of everything is only going one way – up – and it isn't going to come down. You just have to hope that your wages go up." HH Taunton

FINANCIAL OUTLOOK

- Improving
- Remaining the same
- Worsening

Source: Pre task Appendix A, B/C, E: Do you think the current economic situation is...?

Expectations for economic climate in the future (in 5 years, in 10 years)

- There is a fairly even split between those that think they will be better, the same or worse off in the next 5 years with greater numbers feeling uncertain about the longer time horizon.
- A minority believe that the economic climate will be worse off in the next 5 years (13/47) or even the next 10 years (11/47)

LONG TERM FINANCIAL OUTLOOK

5 years

10 years

- Better off
- The same
- Worse off
- Don't know

Source: Pre task Appendix A, B/C, E: Thinking about the current economic climate in the future, do you expect your household finances to be better off, worse off or about the same in the next 5/10 years?

Current bill affordability for water and sewerage services

- A minority (7/40) find it difficult to pay their current water and sewerage bills

"The essential thing when looking at a water company is that everyone has to pay the bill – it's not a choice. Over the last few years people have changed how much they spend on various things, like a holiday – things that are a choice. With essential costs, I think it's making the gap between rich and poor larger. If you're rich you don't really notice your energy bill going up. It's crucial for water companies to look at not increasing the costs year on year. It's morally wrong to keep increasing them."
HH Bath

Proposed Plan

BLUE MARBLE

2050 goals		Wessex Water's proposed plan for 2025-30					
		Legally required <i>No say</i>	5 year targets: <i>customer feedback</i>	Longer term investments: <i>your input on how & when</i>			
Effective sewerage system	Halve the impact of sewer flooding on our customers	Reducing the number of sewage spills in 150 locations	£23	Reducing internal and external sewer flooding	£11	Reduce sewage spills in further 45 locations	£11
Managing demand for water	Never harm the health of the water environment through our abstraction – 100% compliance with our abstraction licences			Reducing leaks	£6	Install smart meters in 90% of all properties	£15
Great river & coastal water	<ul style="list-style-type: none"> To restore the quality of our rivers and coastal waters Zero pollution incidents 	Nutrient removal	£47	Reduce pollution incidents to 14 per 10k of sewer pipe	£4		
Safe and reliable water	<ul style="list-style-type: none"> 100% compliance with drinking water standards, always Zero supply interruptions of more than 3 hours. 			Keep supply interruptions at 5 mins per property	£0	Replace 12,000 lead pipes	£2
Great customer experience	Be a top 10 customer service provider in the UK	Reduce contacts re taste, smell, look	£2	Removing everyone from water poverty	£24		
Net zero carbon & biodiversity	Be a net zero carbon business By 2040			Reduce carbon & pollutants from sewer sludge	£8		
				Operationally net zero	£6		

A 1-page summary of the proposed plan was provided as part of the pre-read information with an explanation of the different categories of investment:

- legally required/statutory;
- 5 year performance commitments;
- additional investments proposed to meet longer term outcomes.

With the proposed plan, your bill will increase by, on average, £32.49 a month (£390 a year) by 2030.

This includes:

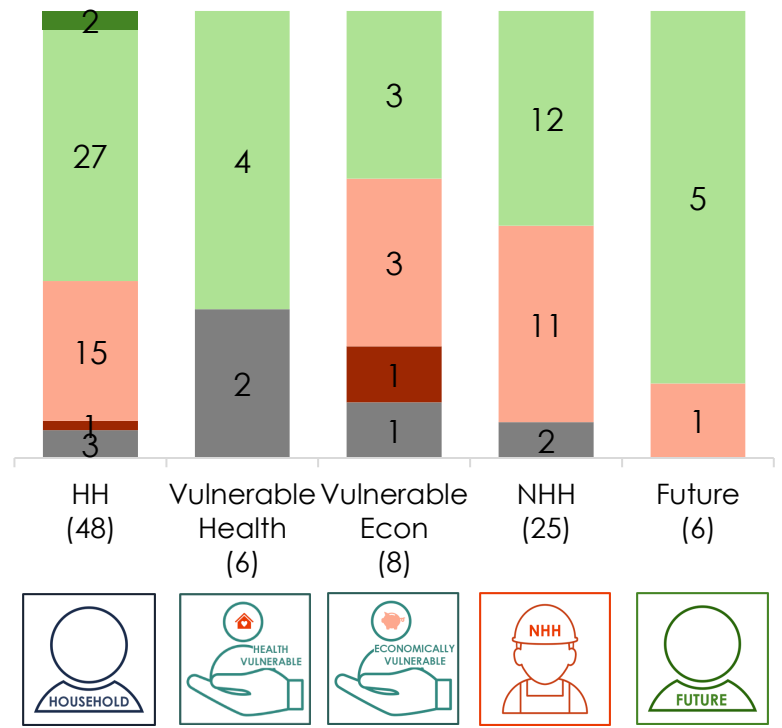

- £10.26 a month statutory investment
- £7.99 a month additional investment
- £14.24 a month of inflation.

Summary: Proposed plan acceptability and affordability

- Acceptability of the proposed plan is mixed, particularly amongst NHH customers and economically vulnerable customers, who were most critical of the plan
- Customers generally feel that it will be difficult to afford the proposed plan

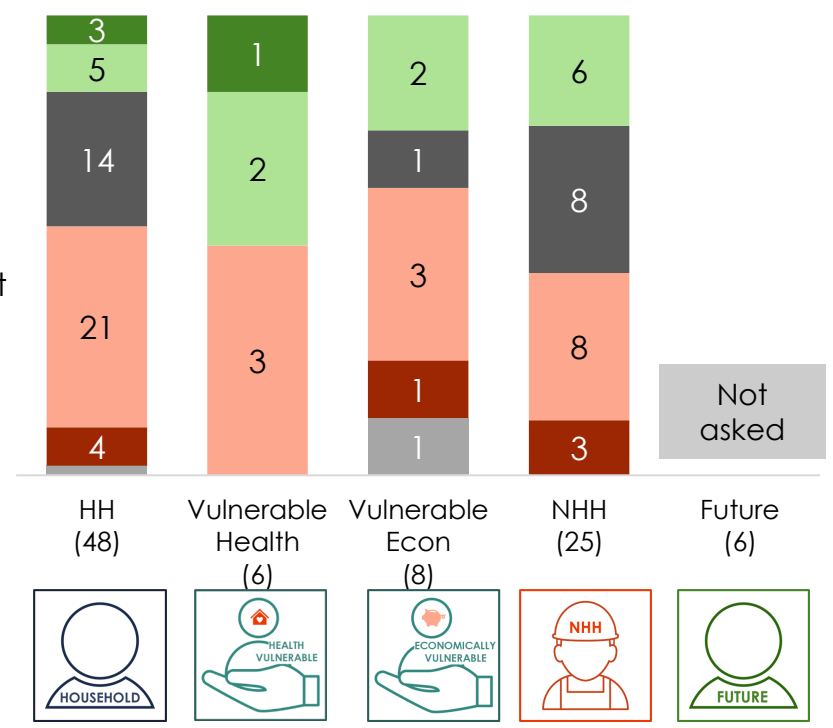

ACCEPTABILITY

- Completely acceptable
- Acceptable
- Unacceptable
- Completely unacceptable
- Don't know

AFFORDABILITY

- Very easy
- Fairly easy
- Neither nor
- Fairly difficult
- Very difficult
- Don't know

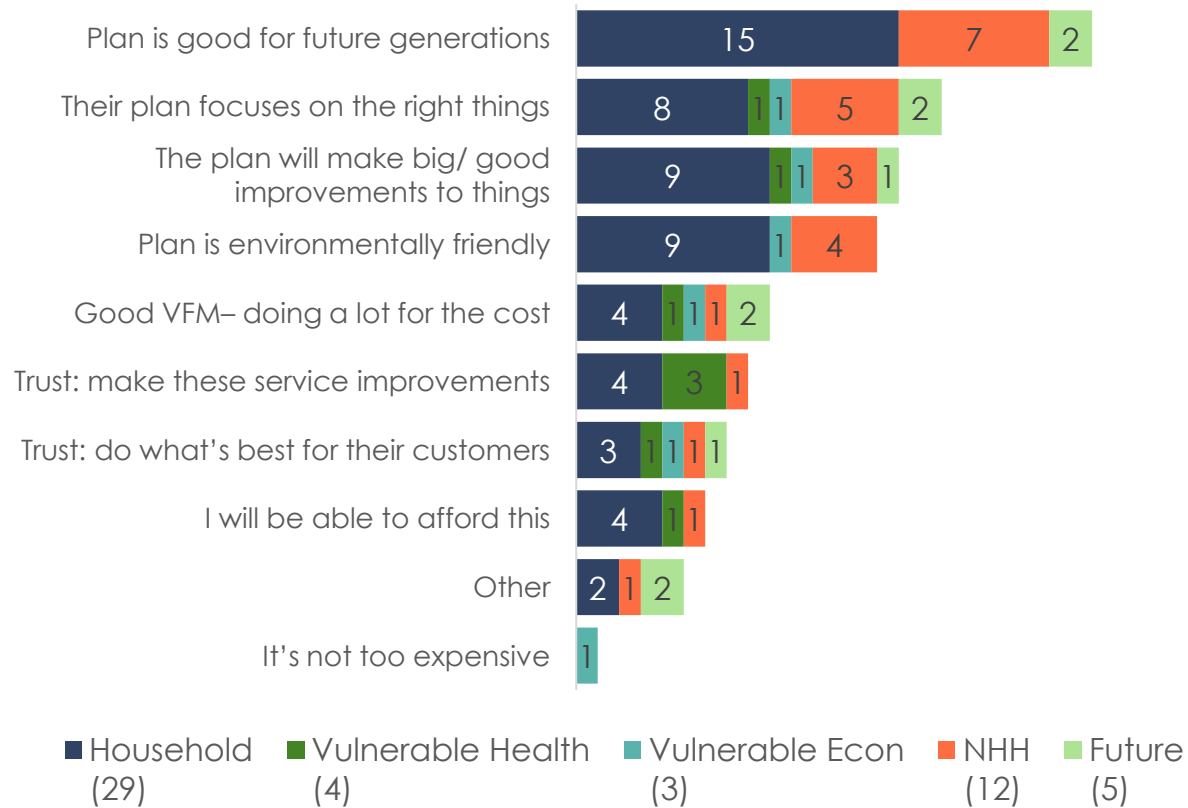

Source: Appendix A, B/C, D, E: Thinking about how your income may change in the future, how easy or difficult do you think it would be for you to afford the water and sewerage bills for the proposed plan? Based on everything you have heard and read about the company's proposed business plan, how acceptable or unacceptable is it to you?

Summary: Reasons for accepting/rejecting the Proposed plan

- The plan is seen as a positive step in the right direction and impactful amongst those who accept the proposed plan
- Those who reject the plan see it as too expensive and believe water companies should have a greater financial responsibility

Reasons for accepting

Reasons for rejecting

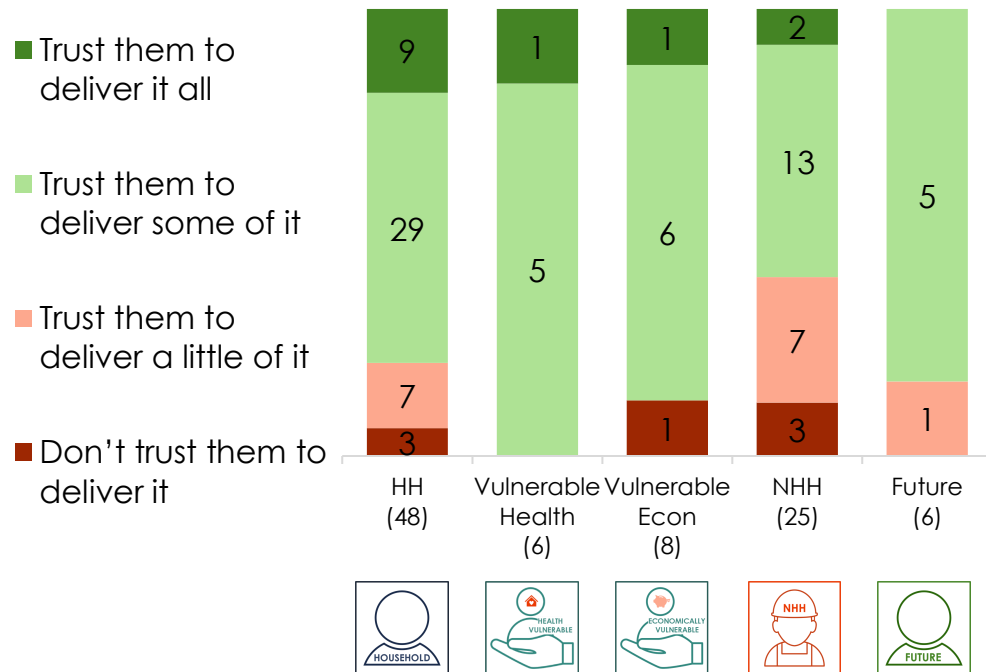

Source: Appendix A, B/C, D, E: Thinking about how your income may change in the future, how easy or difficult do you think it would be for you to afford the water and sewerage bills **for the proposed plan**? Based on everything you have heard and read about the company's proposed business plan, how acceptable or unacceptable is it to you?

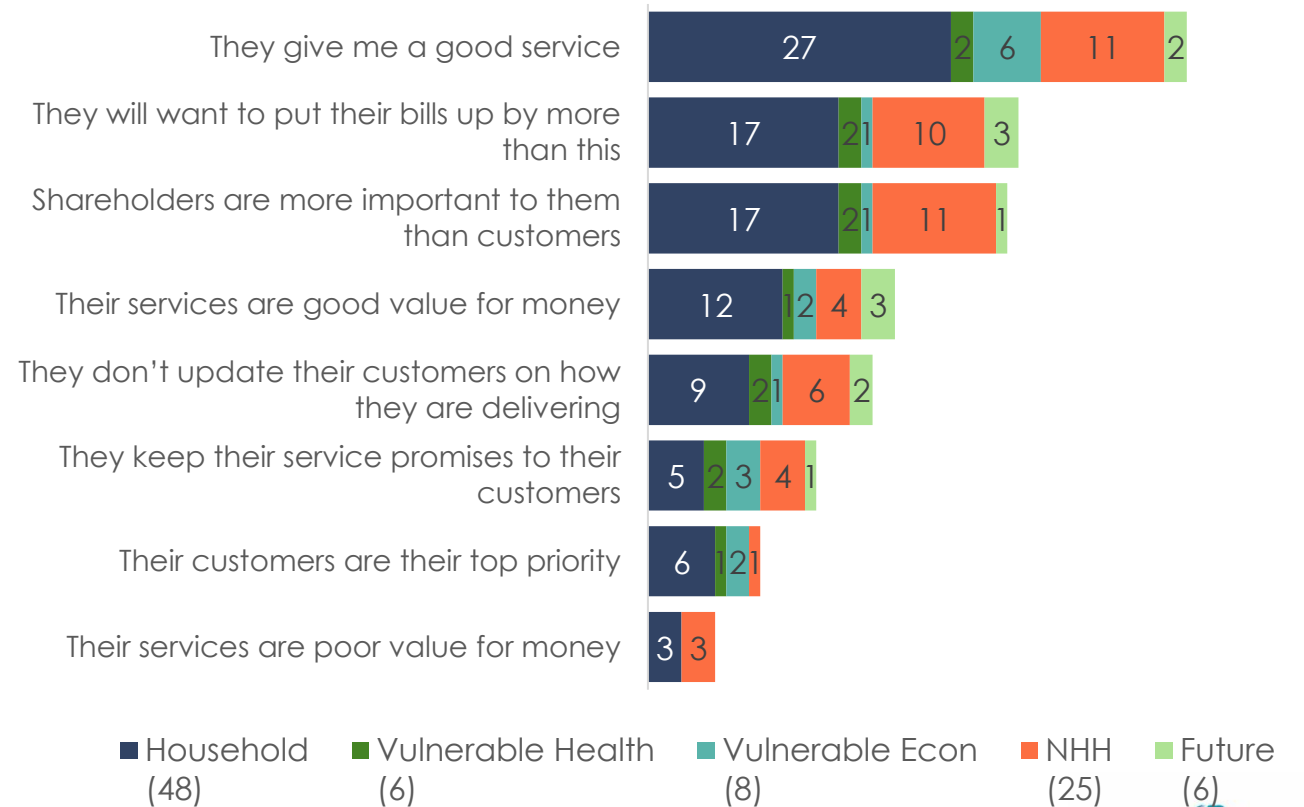

Summary: Trust to deliver proposed plan

- Most trust Wessex Water to deliver the proposed plan to some extent, NHH customers less confident than other groups
- The key driver of trust is Wessex Water's good performance of service but customers also feel that bills will be more expensive than proposed

Reasons why

Response to legally required elements: STORM OVERFLOWS

- High levels of acceptance (and support) for this investment with only a small number questioning the role of customers in funding it through bills. NB: legally required investments always shown first and with the knowledge that there is no choice

An effective sewerage system

37

Legally required
No say

Reducing the number of sewage spills in 150 locations

£23 per year

2050 target:
To halve the number of sewer flooding incidents.

Storm overflows

When there is too much rainfall for sewers to handle, storm overflows allow rain water, mixed with sewage, to escape into a separate pipe which eventually flows into a river or the sea. This helps to reduce the risk of properties being flooded with sewage.

There are around 15,000 storm overflows in England, and 1,300 for Wessex Water.

Each company (in England) has a target set by Government to reduce the use of storm overflows:

- By 2035, water companies will have: improved all overflows discharging into or near every designated bathing water; and improved 75% of overflows discharging to high priority sites
- By 2050, no storm overflows will be permitted to operate outside of unusually heavy rainfall or to cause any adverse ecological harm

Wessex Water will need to spend £540m to meet these requirements for 2025-2030, and this will add £23 per year to the average household water bill.

“2050 is 27 years away and in that time they’ll reduce from 1,300 to 650. That doesn’t seem very ambitious when you look at the numbers, not the percentages.”
HH Bath

Deliberation centres around:

- Awareness of problem and media interest
- Some no longer using rivers/letting family use rivers for water sports/swimming
- Some associate issue with increased rainfall – and see as a growing problem (and urgent)
- Want to know if (quicker) alternatives being sought?
- The hope that expenditure today will mean cost savings in future

Response to mandated investment

- All see as very important and question target: halving by 2050 seems very unambitious
- But acknowledge hard to assess if target is enough
- Pockets of resistance that this is mandatory (for the customer to pay) but overall high acceptance of the necessity of the investment
- Some ameliorate the bill impact e.g. for HHs, £2 a month or 50p a week
- Some are more critical of the need for bill increases at all (esp. NHH): should investment be funded via other means e.g. using profits?

“Should we in this day and age, and in this country, should we be discharging sewage into the sea?”
HH Bath

“Water companies are ATMs!”
HH Bath

Summary	
Important	✓
Urgent	✓
Willing to pay	✓
Able to pay	✓

Response to legal required elements: NUTRIENT REMOVAL

- Lower acceptance of nutrient removal investment as the problem isn't known or understood – and it is unclear what is responsible for this (and therefore who should pay)

Great river & coastal water

38

Legally required
No say

Nutrient removal and river water quality monitoring

£47per year

2050 target
To restore the quality of rivers and coastal waters

The services that water companies provide must comply with environmental laws in England/Wales, as well as UK/Welsh Government policy.

- Excess nitrogen and phosphorus can affect the health of river and coastal waters, negatively impacting plant and wildlife who live there
- A large portion of Wessex Water's region has been designated as requiring additional nutrient removal to allow a further 70,000 homes to be built
- As a result, Wessex Water needs to remove 1,500 tonnes of nitrogen and phosphorus from entering rivers and the sea. This will improve river water quality and help unblock the housing backlog across the country
- Partnership working with farmers and landowners will be vital – and using nature-based solutions where possible, which are often cheaper, create less carbon, and increase biodiversity

Wessex Water will need to spend £830m to meet these requirements for 2025-2030, and this will add £47 per year to the average household water bill.

Deliberation centres around:

- Where are the nutrients coming from? Assume farm run off in which case why are water customers paying – what about farmers?
- Technical, difficult to relate to this investment - 1,500 tonnes is meaningless
- What are the consequences of not doing this?
- Will this trigger new housebuilding which will only go and exacerbate the issue?
- Want to hear about sustainable development – and property companies contributing

*"You'd spend the yearly amount on a night out And it's not right away – by 2030."
HH Bath*

*"If it is required, it's required!"
HH Bath*

Response to mandated investment

- Expensive bill impact: hard to understand the value / benefit
- As most don't understand the issue, how can large bill impact be justified?
- Many accepting however as there is no choice
- But can lead to cynicism about who is profiteering from this and the role of developers

Summary	
Important	?
Urgent	?
Willing to pay	?
Able to pay	?

Response to performance commitment targets

- Many respondents raise spontaneously the rewards and penalties system (that they had seen in the pre-read). They see as illogical and potentially counter-productive (if a missed target means lower revenues to fix it).
- Leakage and pollution targets are frequently challenged as lacking ambition

Wessex Water proposes the following targets for 2025-30 to start to meet its long term goals. 41

			TODAY's performance	Target performance by 2030	What this will add to your bill
Supply interruptions		Average time without water per household	5 mins	5 mins	£0
Water Quality		Contacts per 1,000 population	1.17 contacts	1 contact	£2
Internal sewer flooding		Incidents per 10,000 properties	1.43 incidents	1.04 incidents	£11
External sewer flooding		Incidents per 10,000 properties	19.27 incidents	14.5 incidents	
Leakage		Number of litres lost per property per day	103.29 litres	93.02 litres	£6
Pollution		Incidents per 10,000km of sewer	20.6 incidents	17.6 incidents	£4

"Improve leakage and pollution but don't charge me for it!"
HH Bath

"With each target they are asking for more money. How are they looking to work smarter, change the way they currently operate, use technology?"
HH Bath

-   Agree that this is low priority for improvement
-   See as low priority for improvement: perceive current performance is fine
 - NHH emphasise importance of water quality
 - Bill impact accepted
-   Support target: recognise very few are affected/rare events
 - But the **bill impact looks high**
-   Surprise at level of leakage: this PC received the majority of comments
 - Very high priority issue: **question ambition of target**
 - But also the role of customers in paying for company infrastructure
-   Important target: **many feel it is unambitious**
 - Hard to assess measure (per 10k sewer)

"If it was gas and they lost x amount per day you'd think woah! But because it is water they act like it's fine. It's a precious commodity, it's not to be wasted."
HH Taunton

"If you don't deal with it now you pay more later"
HH Salisbury

"To reduce by 10l/day isn't very much at all"
HH Taunton

Response to plan enhancements: LEAD PIPE REPLACEMENT

- Most accept the proposed plan for some enhancement to the lead replacement programme

Safe & Reliable Water
44

2050 target:
100% of lead pipes replaced

The proposal is to replace 12,000 customer lead pipes in the next per 5-year period, increasing the rate of replacement thereafter to complete full replacement by 2050.

- Lead pipes are estimated to affect 100,000 properties (which is 18% of all households in the region)
- Replacement would involve the 'communication pipe' that runs from the mains to the wall of the house (not within the house)

Wessex Water propose to spend £28.2m on replacing lead pipes, and this would add £2 to the average bill.

Discretionary investments
You decide

Replacing 12,000 lead pipes

£2

Safe & Reliable Water
45

The long term ambition is to replace all 100,000 lead pipes by 2050.

How would you like Wessex Water to pace this investment?

How each option would impact an average bill by the end of each 5-year period

Year	Option A (Pipes)	Option A (Bill)	Option B (Pipes)	Option B (Bill)	Option C (Pipes)	Option C (Bill)
2025	0	£2	0	£1	0	£1
2030	10,000	£5	5,000	£2	5,000	£3
2035	25,000	£7	15,000	£4	15,000	£5
2040	50,000	£8	35,000	£6	35,000	£8
2045	80,000	£9	65,000	£8	65,000	£9
2050	100,000	£11	100,000	£13	100,000	£2

—●— A: Spread investment & bills over 25 years: more pipes removed earlier than the lower cost plan
—●— B: Delay investment now; accelerate investment in the 2040s
—●— C: Investment (and bills) frontloaded to remove more lead pipes sooner

Discretionary investments
You decide

Replacing 12,000 lead pipes

£2 per year

A is the proposed plan.

B is the slower plan

C is the fastest plan

- Deliberation centres around:**
- Surprise that there is an issue at all
 - Should more have been replaced already (and confusion around company vs. customer pipes)
 - Lead doesn't affect everyone: should those affected pay rather than all?
 - Level of urgency: how great a risk is it (if so serious it would be a legal requirement)?
 - Mention of phosphate dosing can alarm (and contradicts other investments to remove phosphates)
 - NHH customers are more likely to question: why now?

"The health benefits haven't been laboured that much... it doesn't seem as pressing as sewage leakage or pollution" HH Bath

"I'm all for getting rid of lead pipes but not out of my own pocket" HH Taunton

- Response to proposed plan and alternatives**
- Target is acceptable (all lead replaced by 2050)
 - Majority opt for proposed plan
 - No perceived urgency
 - But unfair to delay and leave to future generations
 - Prioritise other more pressing investments
 - Relatively low bill impact (the slower option not tangibly better)
 - Some unwillingness to pay at all
 - Question whether water company and/or those with lead pipes should pay

Summary	
Important	✓
Urgent	?
Willing to pay	?
Able to pay	✓

Response to plan enhancements: SMART METER ROLL OUT

- The most contentious area of the plan with low support for the proposed plan to roll out by 2030.

Managing demand for water

Discretionary investments
You decide

Introduce smart meters to manage leaks and help customers lower use

£15 per year

2050 target:
100% compliance with the amount of water it is licenced to take from rivers and groundwater.

The proposal is to have 90% of all properties installed with a smart meter by 2030. This means installing 600,000 smart meters

Wessex Water propose to spend £180m on introducing smart meters, and this would add £15 to the average bill.

Managing demand for water

Discretionary investments
You decide

Introduce smart meters to manage leaks and help customers lower use

£15 per year

A is the proposed plan

B is the least cost plan

The long term ambition is to have 90% of all properties installed with a smart meter. This means installing 600,000 smart meters.

How would you like Wessex Water to pace this investment?

How each option would impact an average bill by the end of each 5-year period

Year	Option A (Investment frontloaded)	Option B (Spread investment)
2025	0	0
2030	600,000 (Bill impact: £15)	~250,000 (Bill impact: £7.50)
2035	600,000	600,000 (Bill impact: £7.50)
2040	600,000	600,000

— A: Investment (and bills) frontloaded to achieve the target by 2030
— B: Spread the investment and bill impacts reaching the target by 2035

Deliberation centres around:

- Barriers to smart meters: obsessing over usage; adding worry about usage; indifference to energy meters
- For unmetered, loss of ability to use water 'freely'
- Perception that energy smart meters were free – so water should be too
- Unclear about the cost benefit for customers: What saving is likely? Will leak reduction lower bills?
- Particular concerns from the economic and health vulnerable samples
- Perception that these are good for the company (leaks) but not the consumer – question the appropriateness of customers paying

"I have smart meter but I don't look at it or turn it on"
HH Taunton

"This is not a good use of our money"
HH Bath

Response to proposed plan and alternatives

- Many question target
- Mixed views on phasing: minority in favour of proposed plan and see the merits of a swift roll out to reap benefits quickly
- However most see investment as a low priority – and opt for least cost option
- Others are not in favour of the idea at all therefore reject the choices – or think customers should opt in (and pay) if want one

Summary	
Important	✘
Urgent	✘
Willing to pay	✘
Able to pay	?

- While the issue is seen as important, customers find it unacceptable they should pay for Wessex Water to transform its operation to net zero

Net zero carbon and biodiversity

Discretionary investments
You decide

Making all operations net zero

£6

2050 target:
Be a net zero carbon business by 2040

Proposal for making the company's operations carbon neutral by 2030

- Moving entirely to electric vehicles
- Increasing the use of renewable electricity
- Finding the best way to reduce emissions from sewage treatment processes
- Using nature-based solutions like wetlands as an alternative to concrete structures
- Where appropriate, purchasing high-quality offsets until Wessex Water can further reduce its own emissions

Wessex Water propose to spend £37m on making all operations net zero, and this would add £6 to the average bill.

48

Net zero carbon and biodiversity

Discretionary investments
You decide

Making all operations net zero

£6

A is the proposed plan.

B is the less ambitious plan

C delays investment in the short term

The long term ambition is to be net zero (i.e. 100% carbon offset) by 2040 .

How would you like Wessex Water to pace this investment?

How each option would impact an average bill by the end of each 5-year period

Legend:
— A: Full operational net zero by 2030
— B: Reach 50% operational net zero by 2035 and stay at that level
— C: Delay investment: Operational net zero by 2035

49

Deliberation centres around:

- Whether customers should pay for net zero at all: it is a requirement of all companies (and the company gets the kudos, not the customers)
 - NHH customers feel EVs and offsets are part of business running costs and should therefore be funded internally
- Should it be an optional extra at all – too important
- Are directors bonused on these targets?
- Question the cost of this – appears expensive (when savings should come from reducing emissions)
- Carbon offsetting is contentious for some (not trusted or understood)

“I’d say carbon neutral is what we want and we should get there as quickly as possible”
HH Bath

“I saw [in the news] a haulage co switching to electric. They are paying for that - so why are we paying Wessex to do the same?”
HH Bath

“I’d much rather pay £6 for this than £15 for Smart meters”
HH Taunton

Response to proposed plan and alternatives

- All support the target but many question the approach e.g.
 - Why rush into EV – unnecessary until current vehicles need replacing
 - Use of offsets
 - NHH particularly unwilling to pay a business cost
- Some opt for proposed plan: important issue
- Others for least ambitious:
 - Primarily for affordability reasons
 - Or believe company should wait for better solutions rather than rush for sub optimal ones

Summary	
Important	✓
Urgent	?
Willing to pay	✗
Able to pay	?

Response to plan enhancements: SLUDGE TREATMENT

- Uncertainties in the plan make customers uneasy about this investment

Net zero carbon and biodiversity

50

Discretionary investments
You decide

Removing micro pollutants

£8

2050 target:
Be a net zero carbon business by 2040

Proposal for improving the treatment of sewage sludge to remove micropollutants from being spread to land

- Trialling new technologies that, if they work, have the potential to turn the sludge into a material that does not have any carbon emissions (essentially an ash) which also destroys micropollutants in the sludge so these wouldn't be spread to land.
- If they work Wessex Water will implement these at scale in the future, reducing the carbon emissions and reducing the volume of the waste product we produce.
- Legislation does not currently prevent sludge being spread to land, but may do so in the future. Wessex Water propose to test new technology now and ensure it develops in case this change occurs

Wessex Water propose to spend £150m on removing micropollutants, and this would add £8 to the average bill.

Net zero carbon and biodiversity

51

Discretionary investments
You decide

Removing micro pollutants

£8

A is the proposed plan.

B is the minimum requirement plan

C is a back up plan for option A

The long term ambition is to be a net zero business by 2040.

How would you like Wessex Water to invest?

Bill impact by end of each 5 year period

£8	£14	£6	£6	£6
£6	£1.50	£0.50	£0.50	£0.50
£10	£9.50	£1.40	£1.40	£1.40

A Proposed: Trialling & implementing new technologies to turn the sludge into a material that does not have any carbon emissions & also destroys micropollutants in the sludge such as microplastics so these wouldn't be spread to land.

B: 'Least cost' option:

- Continue to spread sludge to land by building more storage barns to cope with increasing volumes.
- Test new sludge treatment technologies in the near term in readiness for any future legislation changes, but not roll these out.

NB This option does not reduce carbon impact nor provide a new way to dispose of sludge.

C - Back up: If proposed plans don't work – and the ability to spread to land is significantly reduced, Wessex Water would have to install (carbon intensive) incinerators and dryers at some sites to burn the sludge. This would remove the micropollutants in the sludge

Deliberation centres around:

- Whether this is investing or 'taking a punt' on tech that might not work
- Lots of uncertainties in the proposal
- Technical, unfamiliar area: but the principle of removing pollutants is good
- Question whether there should be more creative alternatives to generate energy
- Want to see collaboration with other water companies – and government
- Should customers be contributing at all?
- NHH consider this a nationwide issue and tech should be tested in collaboration with other companies

Response to proposed plan and alternatives

- Overriding concerns about the proposal – too many questions and uncertainties
- Legislation likely to change the context – and least cost option in conflict with operational net zero?
- Mix of opinion about plan A or plan B
 - Proposed (A) a more sustainable way to tackle the problem – but with risks
 - Must do (B) for those who don't agree with the proposal and want to wait until there are more certainties

"It's taken a long time to understand the damage caused by farm run off and many rivers are now inhospitable to wildlife. We shouldn't delay action."
HH Bath

"If they said they're ready to go with the technology we'd be OK with it."
HH Taunton

Response to plan enhancements: ADDITIONAL STORM OVERFLOWS

- Having accepted the legally required investment, enhanced investment in a further 45 locations is no longer affordable for many customers

An effective sewerage system
52

Discretionary investments
You decide

Reducing sewage spills in a further 45 locations

£11

2050 target:
To halve the number of sewer flooding incidents.

Proposed plan for reducing sewage spills in a further 45 locations - by 2030

- Increase investment in this area from £500 million to £734 million over the five years between 2025 and 2030
- Start with storm overflows that discharge most frequently and those that have any environmental impact
- Work with communities to fit sustainable drainage solutions like soakaways
- Increase environmental and public health monitoring at key locations
- Use artificial intelligence to manage the sewerage network and provide real time bathing water information

Wessex Water propose to spend £250m on reducing sewage spills in a further 45 locations, and this would add £11 to the average bill.

An effective sewerage system
53

Discretionary investments
You decide

Reducing sewage spills in further 45 locations

£11

A is the proposed plan.

B is the legally required plan.

C accelerates the delivery to 2045 instead of 2050

The long-term ambition is for the spills from almost 700 overflows to be reduced in line with 2050 legislative targets

How would you like Wessex Water to pace this investment?

Year	Option A (Proposed)	Option B (Legal)	Option C (Accelerated)
2030	£34	£23	£34
2035	£17	£25	£17
2040	£40	£28	£25
2045	£49	£34	£34
2050	£0	£31	£31

● A: Proposal is to move faster than legal requirement, adding another £11 to 2025-30 bill
● B: Least cost (legally required) plan - this £23 impact already covered earlier
● C: this plan accelerates meeting the target - almost 700 storm overflows reduced by 2045

Deliberation centres around:

- The mounting impact on bills – with this extra investment on top of a legally required £23 increase
- Difficulty evaluating the phasing options: the relative merits of A,B and C hard to judge

"It's a lot. They should look at that again"
HH Bath

"Cost is a big issue for me – to add something extra for a discretionary investment – well I can't pay."
HH Taunton

Response to proposed plan and alternatives

- Agree with overall target, but:
- Concerns about the increased costs starts to outweigh the importance of the investment
- Some opt for the proposed plan despite the increase – see as 'future-proofing'
- Many stick with 'must do' option: the short term acceleration does not appear to be significant in the longer term
- Minority support the acceleration (option C)

Summary	
Important	✓
Urgent	✓
Willing to pay	✗
Able to pay	?

Response to plan enhancements: WATER POVERTY

- The large bill impact means there is a cautious response as many are feeling the squeeze. There is most support for delaying investment.

Customer service & affordability

Discretionary investments
You decide

54

2050 target:
 Zero water poverty – no one spending more than 5% of their disposable income on their water bill

The proposal is to remove everyone from water poverty by 2030 – which means assisting around 100,000 households

- Primarily, using the investment to give financial support to customers in water poverty; also
- Continuing to work with partners such as Citizens Advice to raise awareness and reach customers who need support
- Continuing to fund debt advice partners to increase the number of clients they can advise about bills and debt
- Making it easy to access support: using data to automatically apply bill reductions to customers without the need to complete forms
- Helping customers to save water and energy
- Funding community projects across the region

Wessex Water propose to remove everyone from water poverty by 2030. This would add £24 per to people's bills who are not on social tariffs.

Removing everyone from water poverty

£24

Customer service & affordability

Discretionary investments
You decide

55

The long-term ambition is for 100,000 customers to be lifted out of water poverty

How would you like Wessex Water to pace this investment?

Year	Scenario A (£24)	Scenario B (£12)	Scenario C (£6)
2025	50	50	50
2030	100	75	60
2035	100	100	75
2040	100	100	100
2045	100	100	100
2050	100	100	100

— A: Reach 100k customers supported by 2030
 — B: Reach 100k customers supported by 2035
 — C: Reach 100k customers supported by 2040

Removing everyone from water poverty

£24

A is the proposed plan.

B is the slowest plan.

C delays investment but not as much as B

Deliberation centres around:

- Role of water company vs. state in responding to poverty
- Unappealing for the 'squeezed middle' many identify as being in this category
- Some have benefitted themselves: specifically like the idea of removing the administrative burden on those needing the support
- Some question the fairness, how eligibility is decided

Response to proposed plan and alternatives

- There isn't universal support for the proposal and the use of cross subsidy
- While some are supportive of the proposed plan and paying £24 – reflecting the importance of helping people
- Many opt for the middle way (C) to minimise the burden in the short term

"I'm struggling. To have £24 dumped on my bill quickly would be tough. I don't want to see anybody struggle but why should the burden be on my shoulder? Especially when Directors are taking large bonuses?"
HH Bath

"I don't think it's fair to put such an increase on other bill payers."
HH Taunton

"The squeezed middle are not getting enough help."
HH Salisbury

Summary	
Important	✓
Urgent	?
Willing to pay	?
Able to pay	?

Summary: Preferred Phasing

- Most customers interviewed would prefer seeing an increase in bills starting sooner than later

PREFERENCE

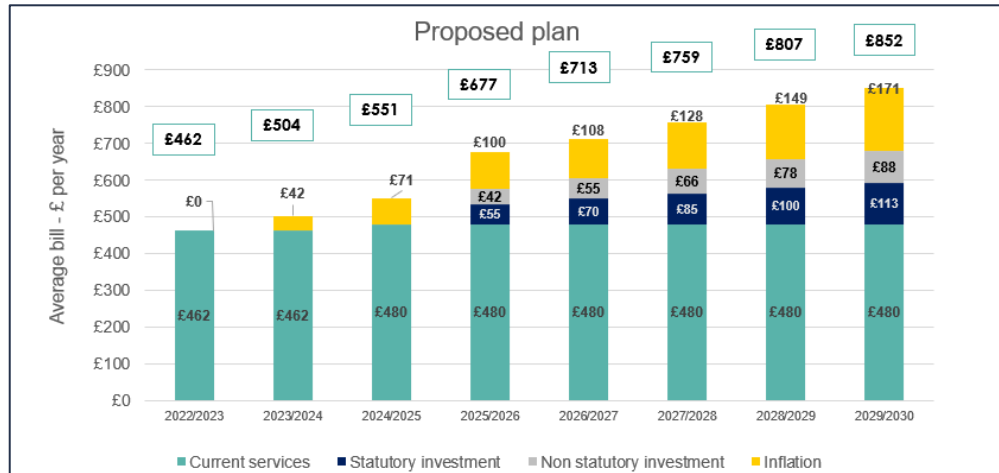

- I don't know enough at the moment to give an answer
- An increase in bills starting sooner, spreading increases across different generations of bill-payers
- An increase in bills starting later, putting more of the increases onto younger and future bill-payers

Source: Appendix A, B/C, D, E: Long term investment by the water company will require an increase in customer bills. Bills could increase in different ways over time. For example, there could be increases now for current bill payers, or bigger increases in the long term for future generations. Which one of the following options would you prefer?

Proposed plan – bill impact (average bill)

- Respondents shown the bill impact based on an average bill (as shown) before seeing their personalised bill as part of the post task exercise

- Surprise and some shock to see the full bill impact to 2030
- Concern for e.g. single occupancy households, pensioners and lower income groups
- Specific shock around the scale of inflation – triggering some to question why bills have to increase with inflation (and how has this been calculated)
- Scepticism that wages keep up with inflation
- The proposals appear to be a relatively small part of the overall bill – but seeing the bill implications causes some to rethink their views on additional investments

"They sound incredibly responsible. They've really thought about what the areas of investment need to be."
HH Bath

"It boils down to whether you trust the water company."
HH Bath

"Inflation is the killer."
HH Salisbury

"It's frightening – bills look like they'll double – and it makes you rethink all of the nice, ambitious things they've proposed."
HH Bath

2050 goals		Longer term investments: your input on how & when		There are 6 areas where Wessex Water can reduce the cost of the plan	
Effective sewerage system	Halve the impact of sewer flooding on our customers				
Managing demand for water	Never harm the health of the water environment through our abstraction – 100% compliance with our abstraction licences		Trial smart meters ahead of rollout	£0.50	It can delay smart meter rollout . A small investment in trials could mean a more successful rollout to be complete by 2040 (not 2030)
Great river & coastal water	<ul style="list-style-type: none"> To restore the quality of our rivers and coastal waters Zero pollution incidents 				
Biodiversity	Double our contribution to the region's biodiversity				
Safe and reliable water	<ul style="list-style-type: none"> 100% compliance with drinking water standards, always Zero supply interruptions of more than 3 hours. 		Replace 6,000 lead pipes	£1	It can reduce lead replacement from 12,000 pipes to 6,000 by 2030
Great customer experience	Be a top 10 customer service provider in the UK		Removing water poverty by 2040	£6	It can achieve eradication of water poverty by 2040 (not by 2030)
Net zero carbon	Be a net zero carbon business by 2040		Delay net zero investment	£2	It can delay its net zero plans by not building the electric vehicle infrastructure or offsetting anything it cannot reduce itself. It will reach 40% net zero by 2030 instead of 100% as proposed.
			Barn storage for sludge	£1	It can manage sludge with storage barns rather than finding permanent alternatives

59

With the must do plan, your bill will increase by, on average, £29.36 a month (£352 a year) by 2030.

This includes:

- £10.41 a month statutory investment
- £5.34 a month additional investment
- £13.61 a month of inflation.

Respondents were shown the must-do plan in overview (as shown).

They were reminded that they had seen each of the 'must-do' elements in the phasing slides, always shown as option B

Must-do plan – bill impact (average bill)

- Signs of 'loss aversion' on being shown the must-do plan: losing too much without a big enough bill reduction

- The cost difference between the two plans is comparatively small... for some this makes them lean towards the proposed plan as better value overall

General themes;

- Environmental benefits are high priority
- Smart meters, operational net zero and water poverty are the areas that many are willing to delay (or in the case of smart meters, don't want at all)
- Affordability is polarising issue – some wouldn't sacrifice this
 - Others feel that water poverty is the responsibility of the government and/or water company
- Lead pipes low priority but also has a low (£1) bill impact

"It's scary. Really scary. An extra £32 a month on top of food, electricity, life. Why can't the government do more? Why is this all passed onto the consumer?"
FUTURE CUSTOMER Bath

"To be honest, even in this scenario bills are still going up massively so given what we are going to HAVE to pay in terms of regulatory imposed actions and inflation, we may as well pay a bit more and get the things WE want"
HH Bath

Proposed vs. Must do

- There is an overall preference for the Proposed plan, though the Must-do plan is on equal footing amongst NHH customers
- Future customers appear much less keen to delay investment while the economically vulnerable favour the lower cost plan

Proposed = 54/93; Must do = 39/93

Ease of choosing

Summary: Proposed and 'must do' plan (personalised bill)

ACCEPTABILITY

- The 'must-do' plan is marginally more acceptable than the proposed plan when people are evaluating the bill impacts based on their personal bill

Source: Appendix A, B/C, D, E: Thinking about how your income may change in the future, how easy or difficult do you think it would be for you to afford the water and sewerage bills **for the proposed plan**? Based on everything you have heard and read about the company's proposed business plan, how acceptable or unacceptable is it to you?

Summary: Proposed and 'must do' plan (personalised bill)

AFFORDABILITY

- The must-do option is slightly more affordable for the HH sample but does not make a notable difference to affordability for the vulnerable audiences

Source: Appendix A, B/C, D, E: Thinking about how your income may change in the future, how easy or difficult do you think it would be for you to afford the water and sewerage bills for the proposed plan? Based on everything you have heard and read about the company's proposed business plan, how acceptable or unacceptable is it to you?

Summary: Reasons for accepting/rejecting the Must Do plan

- Similar to the proposed plan, those who accept it see it as a future thinking and believe it would make a notable improvement
- This plan is largely rejected as customers believe water companies should pay more for the plan and it doesn't focus on the right things

Reasons for accepting

■ Household (31) ■ Vulnerable Health (4) ■ Vulnerable Econ (4) ■ NHH (18) ■ Future (5)

Reasons for rejecting

■ Household (14) ■ Vulnerable Health (0) ■ Vulnerable Econ (3) ■ NHH (7) ■ Future (1)

Source: Appendix A, B/C, D, E: Thinking about how your income may change in the future, how easy or difficult do you think it would be for you to afford the water and sewerage bills for the proposed plan? Based on everything you have heard and read about the company's proposed business plan, how acceptable or unacceptable is it to you?

Conclusions and recommendations

- Ability to pay and willingness to pay are difficult to disentangle in the deliberative discussions
- Conversations often lead back to the role of customers in funding some aspects of the plan

Customers least supportive where the investments:

- Relate to what are perceived to be business costs (e.g. converting to EVs)
- Benefits not understood/approved (smart meters)
- Where they think they are paying for previous underinvestment (lead?)
- Where they think shareholders are being put before squeezed customers (affordability)
- May not work/be effective (sludge disposal)

Customers support the plans where the investments:

- Relate to environmental improvements
- Relate to issues that are perceived important/ relate to known problems (sewer spills, leaks)
- Have been mandated (which takes the burden off the consumer to approve or not)
- Where the bill impact is small (lead)

What will improve plan acceptability & affordability?

- More ambitious leak and pollution performance commitments
- Non compulsory smart meters – or developing a stronger proposition around smart meters and benefits to customers
- Reducing the cost burden for economically vulnerable (who are least accepting)

Presentation and context would support customer understanding of the plan e.g.:

- Commitment to deliver innovation and efficiencies to mitigate bill increases
- Evidence of collaboration with regional stakeholders and across the industry

BLUE MARBLE

Emma Partridge emma@bluemarbleresearch.co.uk

Sonali Patel Sonali@bluemarbleresearch.co.uk

www.bluemarbleresearch.co.uk

Additional segment analysis for Health Vulnerable and NHH customers

Health vulnerable sample achieved = 8/8

- **Age:** 2 x under 45, 6 x over 45
- **Gender:** 4 x F, 4 x M
- **Metering:** 3 x metered, 5 x unmetered
- **PSR status:** 4 x on PSR (2 also on Pension Credit ST)
- **Examples of vulnerability include:** mental health problems, heart & lung condition, old age wheelchair user, COPD
- **Recruitment:** 4 list opt ins, 4 free find
- **Social grade:** wide range from an ex stockbroker to someone on Universal Credit

Consumer context

- Life challenges often relate to living with health conditions (and then financial issues)
- Concerns about the state of the NHS
- Examples of social isolation (poor mobility)
- Reliance on families
- Experience/perceptions of WW in line with main sample but some comment very positively about extra support

Pre-read: Spontaneous views on additional support via PSR / social tariff

- Some are not sure if on PSR or not (one recalls filling out forms but no other confirmation or experience)
- Others have not heard of it – and want to know more
- Question how the PSR will support those with mental health issues
- Lots don't know about the type of help available general

What needs do this segment have?

- Simpler bills: example of someone on low income who actively manage their limited finances finding the bills confusing
- They want to be aware of the range of support available (tariffs and services)
- A clearer understanding of what constitutes 'vulnerable' (example of customer who has missed out on other types of support as 'not vulnerable enough'). Not all will anticipate they will benefit from plans – and may indeed be funding them.

The business plan proposal for vulnerable customers – vulnerability strategy

Wessex Water will continue to follow their ethos: every customer matters

We always go the extra mile

We are accessible for everyone

We provide an inclusive service

We actively look for signs of vulnerability

In future, Wessex Water will continue to develop their goals across these 4 key themes:

<p>Using data wisely</p> <p>This helps Wessex Water to assess the effectiveness and uptake of their support and identify and target activity proactively and effectively</p>	<p>Growing partnerships</p> <p>This area is designed to increase the number and variety of Wessex Water's partners and to work with them in a way that suits them to best engage with their clients, i.e. you – the customer</p>	<p>Community engagement</p> <p>To extend their reach and engagement across communities, break down barriers to engagement and reach those who might otherwise not have been heard</p>	<p>Improving the customer journey</p> <p>To make it as easy as possible for customers to know about and access support through the channel of their choice and to have an excellent customer experience</p>
---	---	--	--

Vulnerability strategy receives mixed views

- On the one hand this looks impressive: Wessex Water demonstrably caring for its customers
- However some concern that this level of support is beyond expectations of a company (when services are being paid for by other customers)
 - Some perceived the strategy to be comprised of too many projects or areas of investment, some of which may not be essential for the company to implement in the 5 year plan within the current cost of living crisis context.
- Primary question mark over the community work: what is it and what is its role/value/purpose?

The business plan proposal for vulnerable customers – customer service

Wessex Water propose to invest in the following areas in 2025-2030 to improve customer service

Improve their customer service offer by:

- Fixing problems faster** by using rapidly developing technology to upskill their teams.
- Giving customers more options to contact them** and, if they want to, allowing them to book an appointment online for Wessex Water to visit them.
- Improving communications with customers** during an event e.g. when working on a road affecting traffic.
- Continuing to **improve their online offering**, including their e-billing service
- Extending their **priority services register**

Develop their work in the community:

- Wessex Water are running two pilot projects to understand how they can **work more effectively with local communities** to deliver shared environmental and social goals
- Continuing their education programme, reaching over 20,000 students and children a year.
- Continuing to engage with customers beyond their water and sewerage bills – at community shows, through recreational access to their sites, or through the support they provide local organisations each year, financially or through their volunteering programme.

“Being more present at shows and being out there makes them more accessible and seem more friendly. The water company seems a bit closed off.”
HEALTH VULNERABLE

“Their business is to supply water to households but they're going into being social helpers - we already have a social system why are they doing that? Their basic job is to deliver water - why are they getting so embroiled with this - I don't see the logic of it. I can understand using data wisely ... if you're losing water you've got a bad leak. None of this is about delivering water to people's houses. All it's going to create is more office jobs to be funded by the water payer - especially with the way things are going in this country.”
HEALTH VULNERABLE

Social Tariff – what is it?

All major water companies in England and Wales have schemes to give lower bills to some customers who might otherwise struggle to pay. These are called **social tariff schemes**.

- In line with Government rules these schemes are mostly funded by charging other households a bit more on their bills. This is what's also known as a **cross-subsidy**. There are a number of examples of cross subsidies in day-to-day life. For example, concessionary tickets for children or pensioners to attractions (e.g. the cinema, theme parks etc.).
- A cross-subsidy for social tariffs adds £6.50 onto the average annual bill for Wessex Water customers.

To date, Wessex Water have helped more than **55,000 households** afford their ongoing water bills or repay their debt through a variety of low-rate tariffs and payment schemes.

Some examples of Social Tariffs that Wessex Water offer include:

Reduced bill: **Assist**

Assist is for customers who are struggling to pay their bills and need a discount.

Bill cap scheme: **WaterSure**

WaterSure helps reduce water bills for households who use a lot of water for reasons beyond their control e.g. a medical condition

Discount for low income pensioners

For customers who are in receipt of Pension Credit, or where the state pension is the only source of income for all adults in the household.

The business plan proposal for vulnerable customers – affordability

Wessex Water propose to invest in the following areas in 2025-2030 to ensure bills are affordable

- Increase the **number of households on their range of affordability schemes** to at least 100,000 by 2030.
- Continue to **work with a wide range of partners** across the Wessex region, such as Citizens Advice and local charities, to raise awareness of the support they can offer and reach customers who need them most.
- Continue to **fund their debt advice partners** so they can increase the number of clients they can advise about their bills and debt.
- Make it as **easy and quick as possible to apply for the support they offer** and use data to automatically apply bill reductions to customers where they can without the need to complete an application.
- Help customers, particularly those on water meters, to **save water and energy**.
- Continue to **fund a number of local community projects** across the region through the Wessex Water Foundation aimed at improving access to services and building financial capability.

Affordability plans

- Increase in support to 100k customers is queried: why this number? Will increasing bills put more people into the bracket who can't afford?
- Funding debt partners called out as sounding very expensive (beyond water company remit) – envisage funding for high street branches of CA etc.
- Some pensioners feel financially compromised as they are now on small/fixed pensions (that they feel are being eroded already)

"I assume they think they aren't helping enough people who are deserving of it - in that case good luck to them. I would support it."
HEALTH VULNERABLE

"It seems like they care and that they want their customers to be proud of them, working for the people and not working for the money. Being more involved with your customers makes you more reliable, more trustworthy."
HEALTH VULNERABLE

"I don't come under that because I'm on the threshold because I've been careful I lose out and there must be thousands like me. means they can't do anything. there are people really struggling but maybe they need to look into why their struggling - going off and buying 10 pints of lager!"
HEALTH VULNERABLE

Priority services register – performance commitment

As we saw earlier, water companies service level targets, called 'performance commitments' for which they can receive penalties (when they do not achieve the target) or rewards (when they do).

The **Priority Services Performance Commitment** is one that has no financial penalties or rewards for companies, but companies are scored on how well they do just like they are on other performance commitments.

For Priority Services, the regulator tells water companies to:

- Keep accurate and up-to-date information on consumers who need specific help or service
- Make sure all consumers are told about the specialised priority services that are available
- Make sure the application process is easy to access, to understand, and to complete
- Make sure consumers can find all the information they need in a form they can use and understand
- Make sure that bill payers who need special assistance know how much they need to pay and when they need to pay by
- Operate a password scheme to make sure that consumers can identify company staff from potential bogus callers
- Make sure all metered bill payers can check their water usage regularly
- Make sure that disabled consumers know which of the company's public buildings and recreational facilities are equipped to cope with their needs
- Make sure that all staff are fully aware of the needs of, and services available for, disabled, chronically ill or elderly consumers

Priority Services PC

- Some happy to see a water company providing this kind of support (for others, more expected)
- No criticisms of the commitment
- Of key importance to this audience is up-to-date information on how to apply.
 - One customer had lost an information letter and received no follow up information.
- Most find Wessex Water's current performance acceptable (+3% on industry comparison)
 - While it is not performing significantly against target, it is seen to be doing what is needed

"They were helping people before people needed so much help. Makes them more trustworthy as a company because they care about their customers and they want feedback."
HEALTH VULNERABLE

"I know what it is (PSR). I'm not sure if I'm on one."
HEALTH VULNERABLE

- Overall, in the post task survey (completed by 6 Health Vulnerable respondents, all positively endorsed by the vulnerability plans (4 of the 6 saying they endorsed them 'completely')

Source: Appendix E: Thinking about the company's proposals for vulnerable services how acceptable or unacceptable are these to you? Health Vulnerable customers (6)

Health vulnerable: Response to plan on a page – affordability and acceptability

- Mixed reaction from health vulnerable customers to the plan on a page; some accept the whole plan, while others challenge water poverty and net zero discretionary investments.
- Those not on PSR or economic support perceive the bill impacts for the proposed plan as unaffordable (NB Must-do plan not explored).

2050 goals		Wessex Water's proposed plan for 2025-30			
		Legally required No say	5 year targets: customer feedback	Longer term investments: your input on how & when	
Effective sewerage system	Halve the impact of sewer flooding on our customers	Reducing the number of sewage spills in 150 locations	£23	Reducing internal and external sewer flooding	£11
Managing demand for water	Never harm the health of the water environment through our abstraction – 100% compliance with our abstraction licences			Reduce pollution incidents to 14 per 10k of sewer pipe	£4
Great river & coastal water	To restore the quality of our rivers and coastal waters Zero pollution incidents	Nutrient removal	£47	Reduce carbon & pollutants from sewer sludge	£8
Safe and reliable water	100% compliance with drinking water standards, always Zero supply interruptions of more than 3 hours.			Operational net zero	£6
Great customer experience	Be a top 10 customer service provider in the UK			Replace 12,000 lead pipes	£2
Net zero carbon & biodiversity	Be a net zero carbon business By 2040			Removing everyone from water poverty	£24

Deliberation centres around:

- Net zero plans: for some unacceptable as requiring governmental, not customer, investment.
 - Some strongly believed that achieving net zero is an unimportant target for the water company.
- A few were concerned that the water poverty goal only targets those in water poverty and had no benefit for other customers.
 - Also concern re relative high cost of 'water poverty' target.

Response to proposed plan:

- Overall acceptance of proposed plan with caveats (above)
- Those already on Social Tariffs accepted the proposed plan and believe it would be affordable if subsidies remain same.
- However, health vulnerable customers (some on PSR) anxious about paying for the the full set of discretionary investments over the 5 year timeline.
 - Health v customers think their health deterioration will make them less able and willing to pay in the future.

"I think if we took all the money out then it's really good goals, what they're trying to do by 2050, their end result goals are really good. I like everything they're trying to do, I just don't know my financial situation in 2030. Because I'm on the Sure Start [sic] scheme, I don't know what my bill would be if I were a normal person...I don't know what that increase would be on top of my bill."

HEALTH VULNERABLE

"(I do not accept) Net zero carbon. I don't believe that the UK is able to make anything other than a drop in the ocean on tackling this when countries like USA and China are going to continue."

HEALTH VULNERABLE

"How do they intend to do that? (Water poverty). People who struggle with bills are probably unemployed or on benefits, so it's not just the water bill that's the problem, they aren't going to be able to pay for other things as well."

HEALTH VULNERABLE

Non-household sample achieved = 26/26

- **Size:** 18 x micro NHH, 8 x larger NHH (over 10 employees)
- **Examples of business type include:** hairdressing, accountancy, plant nurseries, property maintenance
- **Usage type:** 22 x domestic, 4 x non-domestic
- **Usage volume:** 18 x low spend, 8 x high spend

The economic climate has had a significant impact on businesses

- It has been a very difficult few years for businesses having to deal with the disruption of COVID, the impact of Brexit and the cost of living crisis
- However, though they are conscious of their bills going up, they were not against paying for investments that they felt needed to be done

“Any business that's a net zero business is good, because that's the future and you're going to attract a lot more customers generally.”
NHH

“We are getting knocked all ways by [the cost of living crisis]”
NHH

“Covid was a massive challenge because people didn't go out, and even when we offered delivery, some people were still very cautious.”
NHH

Overall, NHH customers were more likely to emphasise the important of responsibility

- They feel more strongly that certain investments should be funded by water company profits, rather than through customer bills; in particular: net zero
- They are more likely to place importance on environmental responsibility; from a business lens, this is something that all companies should be aiming towards

NHH: Response to plan on a page – affordability and acceptability

- Whilst almost all NHH customers were happy with the investments proposed and felt they were worthwhile...the sample were split between accepting and not accepting the proposed plan
- Those who did not accept more often objected to the method of funding investments rather than the investments

2050 goals		Wessex Water's proposed plan for 2025-30			
		Legally required <i>No say</i>	5 year targets: <i>customer feedback</i>	Longer term investments: <i>your input on how & when</i>	
Effective sewerage system	Halve the impact of sewer flooding on our customers 	Reducing the number of sewage spills in 150 locations £55	Reducing internal and external sewer flooding £25	Reduce sewage spills in further 45 locations £27	
Managing demand for water	Never harm the health of the water environment through our abstraction – 100% compliance with our abstraction licences 		Reducing leaks £13	Install smart meters in 90% of all properties £34	
Great river & coastal water	To restore the quality of our rivers and coastal waters Zero pollution incidents 	Nutrient removal £111	Reduce pollution incidents to 14 per 10k of sewer pipe £7		
Safe and reliable water	100% compliance with drinking water standards, always Zero supply interruptions of more than 3 hours. 		Keep supply interruptions at 5 mins per property £0	Replace 12,000 lead pipes £5	
Net zero carbon & biodiversity	Be a net zero carbon business By 2040 		Reduce contacts re taste, smell, look £4	Reduce carbon & pollutants from sewer sludge £18	Operationally net zero £10

"That's quite costly. That's a lot of money when they're so profitable already."
NHH

"It's got to be for me, the quickest way to address these problems and that has to be the sharpest investment, as much as it irks me to say it."
NHH

Deliberation centres around:

- NHH customers placed specific emphasis on the importance of water quality (as their own customers may consume or use this)
- They were more likely to feel strongly that water companies should fund investments
- NHH were more likely to think about the wider picture:
 - For lead pipes, NHH customers wanted more info on why replacement should happen now if the current water supply doesn't risk health
 - For sewage sludge, they wanted to see nationwide testing of the technology
- NHH customers strongly felt that net zero should be entirely funded by Wessex Water and not through bills
- NHH customer seek value for money – they want to see smart strategies for investments; for some, the Must Do plan doesn't provide enough for the amount you pay

Response to proposed plan:

- Those who accepted the proposed plan felt Wessex Water were focusing on the right things and doing the right thing by future generations and the environment
- Those who did not accept the proposed plan were against paying for investments that they felt Wessex Water should be paying for – both because it's their responsibility but also because it's unfair to ask customers to pay when they have high profits and are paying out their shareholders

"I don't feel the increase justifies what we're getting for it on the lower one [MUST DO]. it's touching on things but not touching on enough for me."
NHH

Event feedback

BLUE MARBLE

Event feedback: ratings of the deliberative events

The events and depth interviews received positive feedback from all customers groups. Household and health vulnerable customers were most likely to rate the research events between 8-10 out of 10.

Out of our sample:
74/94
 would rate the events 8/10, 9/10 or 10/10

Source: Appendix A, B/C, D, E: Overall, how would you rate this event out of 10? (Where 1 is terrible and 10 is excellent)

Event feedback: reasons for ratings

Participants found the events and interviews informative, interesting, and well-run; they also appreciated being asked for their opinions. Participants who gave lower ratings felt that they needed more time or information to make informed decisions.

	Reasons for ratings of 10-8	Reasons for ratings of 4-7
HH	<ul style="list-style-type: none"> Friendly staff and moderators Informative event and appreciate being asked for feedback Good venue, location, and refreshments Well organised and enjoyable event 	<ul style="list-style-type: none"> Too much information to take in Difficult to answer questions properly, e.g. because of time limits
NHH	<ul style="list-style-type: none"> Informative, easy to understand, useful to know why bills are increasing Appreciate being involved and being asked for input Good communication and discussions 	<ul style="list-style-type: none"> Want more information and time to make informed decisions Not sure that opinions will be acknowledged
Future	<ul style="list-style-type: none"> Staff were welcoming and made participants feel comfortable Informative and interesting content 	<ul style="list-style-type: none"> The event was too long Difficult to express opinions because of louder participants
Health Vulnerable	<ul style="list-style-type: none"> Appreciate being consulted and gaining insight into the water industry The event was informative 	<ul style="list-style-type: none"> Don't have enough information about the future to answer questions

"Very informative and useful to know how my opinion can impact the future bills."
Future customer Answer: 8/10

"Learning about how water companies was much more interesting than I anticipated. The group discussions were lively and stimulating. It was excellently organised in a lovely location."
HH Answer: 9/10

"It's encouraging that, for once, a customer consultation process intends to take note of the responses."
Health Vulnerable Answer: 10/10

"With all the unknowns and uncertainties in the future I didn't feel able to make fact based preferences for the various plan options."
HH Answer: 5/10

"I feel that some of the information requires more context in order to make conclusive decisions either way."
NHH Answer: 5/10

"I don't feel I have enough information to answer these questions in an informed manner at this point."
Health Vulnerable Answer: 5/10

"Everything was explained in a good level of detail which prompted good discussion and a mixed opinion base meant for good overall debate."
NHH Answer: 10/10

Event feedback: suggestions for improvements

Most participants didn't make any suggestions for improvements. Of household and non-household participants who did, suggestions that would allow for more informed decisions were most common, such as allowing more time to digest information, providing more context, or making the information more simple to understand.

HH

- Improving **event accessibility** (e.g. more car parking nearby, better acoustics, letting participants know they'll be looking at a screen) suggested by 7 participants – though they didn't all suggest the same things
- Allowing **more time** for absorbing information and reaching conclusions (e.g. by sending information to participants before the event) suggested by 6 participants
- Providing **more information** and context (e.g. background on how figures are worked out, information on company profits) was another common suggestion, made by 5 participants
- Other suggestions made by a few participants included longer or more frequent break times, smaller groups, wider range of participant backgrounds and professions, and including Wessex Water representatives

NHH

- Some suggested providing **more information** (e.g. more context about what the numbers mean, making more information available to facilitators so they could answer questions)
- A few suggested making information **more simple to understand** (e.g. using layman's terms, including less information and fewer graphs on slides)
- A few suggested a shorter event, a later start, or more frequent breaks

Future

- Some suggested a **shorter timeframe** for the event
- A few suggested **more snacks**
- One suggested including more varied activities

Health Vulnerable

- Individual suggestions included splitting the group into smaller groups, asking for opinions when participants have more information about the future, and improving Zoom

"Ask these questions when participants have more information."
Health Vulnerable
Answer: 5/10

"Allowing a longer time to take in all the information, giving the ability to respond informatively."
HH Answer: 6/10

"Smaller groups, better snacks, less than 3 hours and more than 5 mins per question."
Future Answer: 7/10

"Some of the older attendees struggled with tech and acoustics."
HH Answer: 8/10

"More context as to what some of these numbers mean."
NHH Answer: 5/10

"More info and detail and perhaps a rep from the company to ask questions of."
NHH Answer: 10/10

Addressing Ofwat's research principles – qualitative

Standards for high-quality research:	How addressed in this project:
Useful and contextualised	This forms part of the PR24 research requirement, and we followed the guidance throughout. Respondents were provided with a pre-read document and a self-completion survey to enable them to become familiar with the current performance of Wessex Water, some background on how e.g. performance commitments work, and a 'plan on a page' showing the discretionary and 'must do' parts of the proposed business plan. Within the deliberative sessions, we also used stimulus materials to aid understanding and provide context.
Fit for purpose	<ul style="list-style-type: none"> • We followed Ofwat guidance throughout to ensure both the research sample and methodology were fit for purpose. We challenged some elements of the guidance (around visual presentations of performance, for instance) where we felt improvements could be made. • The HH customer sample was sourced from 'opt-ins' following a customer email/letter invitation from Wessex Water, distributed by our recruitment partners at QRS. NHH and Future customers were recruited using 'free-find' methods. • A screening process ensured we reflected all types of Wessex Water customers according to the guidance: across all ages, gender, socio demographic groups – and including subsets of vulnerable customers. • Face to face deliberative events were held to achieve the optimum experience for deliberation, and to allow observers to attend. Online groups and depths were held for specific groups for whom the face-to-face approach would be a barrier to participation.
Neutrally designed	Blue Marble designed reflected the guidance in drawing up materials including the discussion guides, stimulus materials and pre/post tasks. These are all designed with impartiality. A pilot group amongst Wessex Water friends and family was held to test the methodology and specifically the comprehension of the materials.
Inclusive	<ul style="list-style-type: none"> • Stimulus produced in plain English – all mediated by a research moderator • Option for respondents to bring a supporter to the sessions (to help navigate online tech and/or the research questions – who would also be paid an incentive) • Pre-read materials provided in document and video format to aid comprehension. • Local venues chosen with accessibility in mind e.g. familiar, with easy parking, and with accessibility needs met. • Incentives provided to compensate for any out-of-pocket costs
Continual	Wessex Water to advise
Shared in full	Wessex Water to advise
Ethical	Blue Marble is a company partner of the MRS, senior team members are all Members of the MRS and/or SRA. All Blue Marble's employees abide by the MRS Code of Conduct and as such all our research is in line with their ethical standards.

Acceptability and Affordability Testing

Quantitative Research Report – Final
20th September 2023

- 1** Method
- 2** Context
- 3** Future bill affordability
- 4** Business plan components
- 5** Acceptability of proposed plans
- 6** Summary

Sample & method overview – all phases

TOTAL SAMPLE	QUALITATIVE  96	QUANTITATIVE  2,373
Sampling	48 Household customers (HH) 8 Future Customers (FUT) 8 Health vulnerable (H-VULN) 8 Economically Vulnerable (E-VULN) 26 NHH (SME's and large users)	Water and sewerage customers receiving water supply from Wessex Water (975). Sewerage only customers receiving water supply from Bristol Water or Bournemouth Water (1,398).
Method	3 x 3-hour Deliberative events (in-person) (HH, E-VULN & FUT) 2 x online reconvened groups - 90 min + 90 min (NHH) 16 depth interviews (H-VULN, LARGE NHH)	<ul style="list-style-type: none"> • HH: Push to web <ul style="list-style-type: none"> • N=10,800 customers invited for Wessex Water supply area • N=8,800 for each of Bristol Water and Bournemouth Water supply areas • One reminder was sent to all customers (excluding those who had completed the survey after the first invitation) • NHH: Telephone push to online using business directories & online panel sample
Incentive	£50-100 depending on method/sample (£200 for NHH)	HH - £5 Amazon or Love2Shop voucher NHH - £25 Amazon voucher or £25 donation to Water Aid (or standard panel incentives for B2B panellists)

Sample & method

- No deviations from the prescribed sample & method (in qualitative and quantitative stages)
- Included one reminder in the quantitative*

Questionnaire

- Some minor changes
- Included age bands* (agreed by Ofwat)
- Question labelling where Ofwat did not include this detail
- Small (functional) edits to avoid ambiguity esp. relevant to clarify which company
- Printed versions needed additional signposting for routing

Joint plans

- Approach to reminders consistent across 3 companies (WW, BRW and BW)
- Fieldwork timing slightly different (BRW & BW started later)

Plan stimulus

- Cognitive testing* led to changes that were agreed by Ofwat and led to industry-wide guidance amends

Quality Control & Analysis

- All according to guidance e.g. removal of 'speeders'

* Following CCG recommendation

3 x 3hr face-to-face deliberative events

Stage 1: Participants to go through pre-read pack and fill out pre-task survey

Stage 2: Participants to attend 1 x 3hr event each in person

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

Micro NHH

2 x 90min reconvened online focus groups

Stage 1: Participants to attend first 90 min focus group

Stage 2: Participants to attend second 90 min focus group

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

Larger NHH

8 x 1hr online video depth

Stage 1: Participants to go through pre-read pack and fill out pre-task survey

Stage 2: Participants to attend 1 x 1hr online depth

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

8 x 1hr online video depth

Stage 1: Participants to go through pre-read pack and fill out pre-task survey

Stage 2: Participants to attend 1 x 1hr online depth

Stage 3: Participants to complete post-task survey and answer questions based on their personal bill projections

Total sample achieved = 96/96

Total number of responding to invitation letter: c180 opted in to participate

Household sample achieved = 48/48

- **SEG:** 13 x AB, 25 x C1C2, 9 x DE
- **Age:** 19 x under 45, 28 x over 45
- **Gender:** 25 x F, 22 x M
- **Metering:** 28 x metered, 12 x unmetered, 7 x don't know
- **Recruitment:** 38 x list opt ins, 8 x free find, 2 x extras

Future customer sample achieved = 8/8

- **SEG:** 3 x AB, 5 x C1C2
- **Age:** 8 x 18-30
- **Gender:** 5 x F, 3 x M
- **Recruitment:** 8 x free find

Economically vulnerable sample achieved = 8/8

- **Age:** 4 x under 45, 4 x over 45
- **Gender:** 5 x F, 3 x M
- **Metering:** 3 x metered, 5 x unmetered
- **Social tariff:** 3 x ST, 5 x eligible for ST
- **Recruitment:** 8 x free find

Non-household sample achieved = 26/26

- **Size:** 18 x micro NHH, 8 x larger NHH (over 10 employees)
- **Examples of business type include:** hairdressing, accountancy, plant nurseries, property maintenance
- **Usage type:** 22 x domestic, 4 x non-domestic
- **Usage volume:** 18 x low spend, 8 x high spend

Health vulnerable sample achieved = 8/8

- **Age:** 2 x under 45, 6 x over 45
- **Gender:** 4 x F, 4 x M
- **Metering:** 3 x metered, 5 x unmetered
- **PSR status:** 4 x on PSR
- **Examples of vulnerability include:** mental health problems, physical health conditions, old age
- **Recruitment:** 4 list opt ins, 4 free find

Household

Non household

Fieldwork dates

18 Jul – 20 Aug 2023 (Wessex Water supply area customers)
 28 Jul – 3 Sept (Bristol Water & Bournemouth Water supply area customers)

25 Jul – 29 Aug 2023 (Wessex Water supply area customers)
 4 Aug – 5 Sept (Bristol Water & Bournemouth Water supply area customers)

Sampling

- For each supply area a randomly selected sample was drawn from the total customer database, within IMD quintile in proportions as prescribed by Ofwat.
- Exclusions were kept to a minimum; Single service (water supply only) customers were included in the sample for the Wessex Water supply area; all customers in the Bristol Water and Bournemouth Water supply areas paid for both water supply and sewerage services from the water companies.
- Invitations were sent by email to those customers for whom an email address was held, and by letter to the remainder
 - N=10,800 customers invited for Wessex Water supply area, and N=8,800 for each of Bristol Water and Bournemouth Water supply areas
- One reminder was sent to all customers (excluding those who had completed the survey after the first invitation)

Two approaches were used:

- Telephone push to online: Dunn & Bradstreet business directory used to generate list of telephone numbers of organisations in each supply area. Numbers randomly called, in order to gather email address and send on email invitation to the survey
- Commercial online business-to-business panels: 5 panel partners were enlisted to provide online sample
- IP address was collected in order to remove any duplicates across the two methods.

Format

Online survey (link provided in emails and letters) plus printed versions provided upon request for those who could not complete online

Online survey only link provided in email)

Incentive

£5 Amazon or Love2Shop voucher

£25 Amazon voucher or £25 donation to Water Aid (or standard panel incentives for B2B panellists)

Response rate

Across the three supply areas (after one reminder):
 c. 7% completion rate in response to email invitations
 c. 6% completion rate in response to letter invitations

Response rate to the telephone push to online approach was very low at c.0.5%, so online panels needed to be used for the large majority of surveys. Panels used: **Dynata, Bilendi, Pure Spectrum, Walr, Mindforce**

CCG recommendation	How implemented	Impact
<p>Reminders (ideally multiple reminders) should be issued for quantitative survey to maximise response rate and representativeness of achieved sample</p>	<p>One reminder sent (either an email or a letter) to all customers excluding those who had completed the survey after the first invitation.</p>	<p>Reminders generated a significant uplift in response therefore improving representativeness of the sample. For the Wessex Water supply area, cumulative response rates were:</p> <p>Email: After initial invitation 3.9%; after reminder 7.2% Letter: After initial invitation 3.8%; after reminder 6.5%*</p> <p>A single reminder generated an overall response uplift of over 70%.</p>
<p>Age band question should be added for those not willing to enter their exact age to maximise inclusivity and representativeness</p>	<p>An age band question was added in for those who did not wish to type in their exact age. Further, for those who did not wish to enter their age band, a question was added to check if they were 18 years or above; in this case they were allowed to continue.</p>	<p>Taking the Wessex Water supply area as an example, 36 eligible customers entering the survey (c5%) did not wish to type in their age in the Ofwat-prescribed question. 20 of these entered their age into the new age band question, with 16 still preferring not to say. These 16 all confirmed they were 18 years old or above, and so were also allowed to continue.</p> <p>These changes avoided the exclusion of c. 5% of household customers from the final sample.</p>

*This is best estimate, accounting for additional ‘booster’ invitations sent at the same time as the initial letter reminders

- Data weighting was applied following Ofwat guidance
- Five layers of weighting were applied based on the principle of representativeness:
 - Age (within supply areas)
 - Gender (within supply areas)
 - Index of Multiple Deprivation (IMD) quintile (within supply areas)
 - Overall proportions of household : non household based on overall water use (within supply areas)
 - Geographic representation – overall number of customers in each supply area

- To achieve the targets, rim weighting was applied via specialist survey data processing software (Merlin)
- A technical weighting report is available separately
- Key outputs of the weighting report are:
 - Overall unweighted base size: 2,373
 - Overall effective weighted sample size: 1,688
 - Min weight: 0.095
 - Max weight: 3.214

PART ONE Weighting for HOUSEHOLD sample within each supply area			
	Wessex	Bristol	B-mouth
Age (Based on 2021 Census, adjusted for % living with parents)

Q2 / Q3 / Q4
Base Household bill payers (1935)

Qualitative insights (focus on household customers)

- Broadly, the qualitative stage of research (in May 2023) showed a comparable picture to the larger scale quantitative sample; no dramatic change in wider sentiments between the two phases of research – although indications of a slightly less pessimistic long-term outlook at the Quant stage.
- In the qualitative research:
 - the majority of the domestic sample (31/47) said they fell somewhere between 'just getting by' and 'struggling' when it comes to household finances
 - ...and most (37/47) thought that the current economic situation was worsening
- A range of circumstances evident in the qualitative research show that even people with higher incomes and no financial vulnerability can *feel* as if they are struggling
- Qualitative research showed that many people were pre-occupied by price rises happening in 'the here and now'.

"I work full time on a well above average salary and my wife still had to go back to work after a few months of maternity just to make ends meet." HH Salisbury

"I have a new job with a relatively low income which barely covers my day to day expenses, and I also have debts to repay. I don't have money left over to save each month" HH Taunton

"Because, while I am making the bills each month, there is never any money to put aside." HH Bath

"I have to think about the here and now." HH Salisbury

"The normal weekly shop is getting more and more expensive... some places are just using it as an excuse to make profit" HH Salisbury

Current water and sewerage bill affordability

More currently find their water bill easy to afford than difficult. Those who are finding it difficult to manage financially are much more likely to be struggling to pay their current water services bill. Notably it is not just customers in lower income brackets who find it difficult to afford.

How easy or difficult to afford current water & sewerage bill?

Q4. How easy or difficult is it for you to afford to pay your/your organisation current water and sewerage bill? **Base** Total household and non-household bill payers (2373); Total household bill payers (1935); Total non-household bill payers (438). **WEIGHTED % FIGURES ARE DISPLAYED and UNWEIGHTED BASE SIZES**

How easy or difficult to afford current water and sewerage bill?

Quantitative data

Q4 How easy or difficult is it for you to afford to pay your current water and sewerage bill?

Base HOUSEHOLD bill payers (1935)

Qualitative insights

- Affordability of customers' current water and sewerage bill in the qualitative research was a similar picture to the quantitative research:
 - A minority (7/40) of household customers in the qualitative research found it difficult to pay their current water and sewerage bills
- Qualitative research suggests that bills are seen as an essential and that there is no choice but to make do to afford them, but bills do impact on spending on other aspects of day-to-day life

“The essential thing when looking at a water company is that everyone has to pay the bill – it’s not a choice. Over the last few years people have changed how much they spend on various things, like a holiday – things that are a choice. With essential costs, I think it’s making the gap between rich and poor larger. If you’re rich you don’t really notice your energy bill going up. It’s crucial for water companies to look at not increasing the costs year on year. It’s morally wrong to keep increasing them.”
HH Bath

Future bill affordability for business plan

Household customers were shown the bill increases for 2022-23 to 2029-30, based on their current annualised bill (and whether or not they are on social tariff, as flagged in the customer sample). Where bill information was not available, a bill profile based on the average annualised bill was shown

Non-household customers were shown the bill increases for 2022-23 to 2029-30, based on a bill of £1000 for 2022-23.

The bill is split into the proposed costs to cover the investments in water and sewerage services needed over the next few years, and predicted inflation (in orange).

Example personalised bill profile shown

Just over 4 in 10 foresee they will struggle with the future bill increases – NHH customers more confident that they can afford the future water and sewerage bills than household customers

Lowest income households, lower social grade, and households who do not feel 'comfortable or alright' financially are more worried about being able to afford – a clear role for development of appropriate support – but it may need to go beyond a minimum income threshold

Affordability of water & sewerage bills up to 2029-30

While 4 in 10 NHH customers think it will be 'easy' to afford the bill profile to 2029-30, few household customers have this sentiment – even those who are comfortable financially

In the current financial climate, even higher income bracket households are reluctant to say that the proposed bill increases will be 'easy' to afford; many choose the neutral answer of 'neither easy nor difficult'

Affordability of water & sewerage bills up to 2029-30

Easy to afford

Difficult to afford

Easy to afford	23%	16%	41%
Difficult to afford	42%	46%	32%

- Very easy
- Fairly easy
- Neither easy nor difficult
- Fairly difficult
- Very difficult
- Don't know / can't say

Bill Affordability to 2029-30 – Household subgroup differences

% of each group who think it will be easy to afford

Q5. How easy or difficult do you think it would be for you to afford these water and sewerage bills?

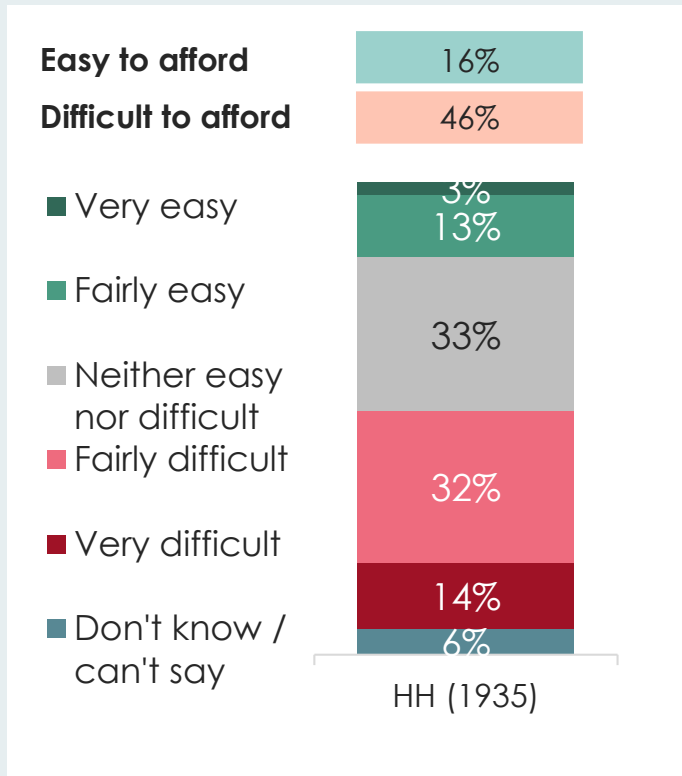

Base Total household and non-household bill payers (2373); Total household bill payers (1935); Total non-household bill payers (438).

WEIGHTED % FIGURES and UNWEIGHTED BASE SIZES are displayed

Proposed plan bill affordability – Qualitative context

Affordability of water & sewerage bills up to 2029-30 (Total households)

Q5 How easy or difficult do you think it would be for you to afford these water and sewerage bills?

Base HOUSEHOLD bill payers (1935)

Qualitative insights

- Affordability of the proposed plan in the qualitative research was a very similar picture to the quantitative research:
 - 8/48 of the household sample (Wessex supply area) said it would be easy to afford the proposed plan and 25/48 said it would be difficult to afford.
- The qualitative research showed customers were surprised to see both....
 - the **rate** of increase
 - the scale of **inflation**
- There is a nuanced picture with those who say it will be 'difficult to afford': The sense from the qualitative research is that many are commenting on their lack of willingness to pay for bill increases, as opposed to their inability to pay.

"Inflation is the killer."
HH Salisbury

"It's frightening – bills look like they'll double – and it makes you rethink all of the nice, ambitious things they've proposed."
HH Bath

How would customers pay for increased water bills between 2025 and 2030

The most widespread strategy of paying higher bills is by reducing discretionary spend but also limiting spend on day-to-day essentials like food, gas and water. Those struggling financially much more likely to spend less on essentials, as well as using credit and asking family.

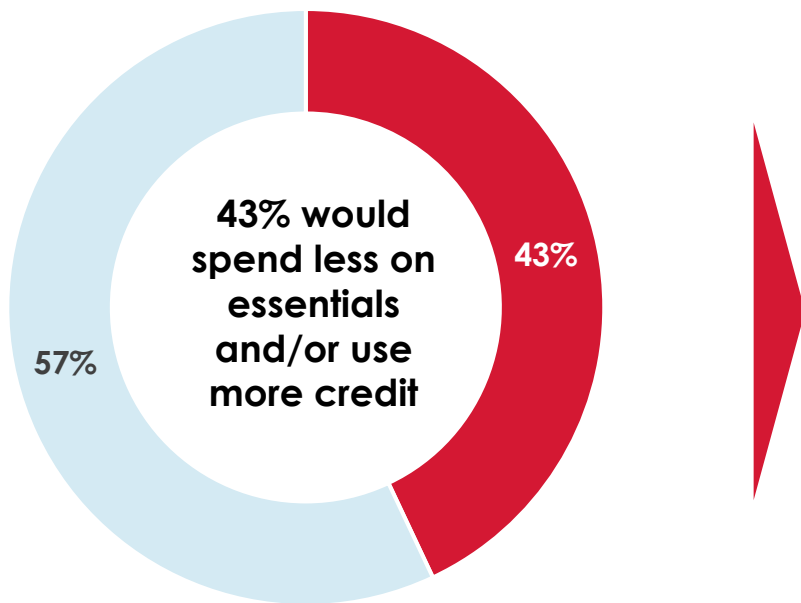

Which of the following would you need to do to pay for the water bill increases between 2025 and 2030? (Household customers who would not find it easy to pay the proposed bill from 2025-2030)

How would customers pay for increased water bills between 2025 and 2030

45% of customers who would not find it easy to pay the proposed bill say they would need to either spend less on food shopping and essentials and/or resort to using more credit than usual – serious measures to cope with bill pressure. This increases to over three quarters of those who say that they are finding it difficult to manage financially ('struggling households').

Which of the following would you need to do to pay for the water bill increases between 2025 and 2030?
 (Based on household customers who would not find it easy to pay the proposed bill from 2025-2030)

Preferred phasing of water bill increase

There is a preference for the bill increasing sooner rather than later, though over a third give no opinion either way.

Which of the following options would you prefer?

- Starting sooner, spreading increases across different generations of bill-payers
- Starting later, putting more of the increases onto younger and future bill-payers
- I don't know enough at the moment to give an answer

Total HH & NHH	Household only	Household vulnerable	Household struggling	Non household
----------------	----------------	----------------------	----------------------	---------------

Q9. Bills could increase in different ways over time. For example, there could be increases now for current bill payers, or bigger increases in the long term for future generations. Which one of the following options would you prefer? **Base** Household and Non household bill payers: Total (2373); Water and sewerage customers receiving water supply from Wessex Water (975). Sewerage only customers receiving water supply from Bristol Water or Bournemouth Water (1398). **WEIGHTED % FIGURES ARE DISPLAYED and UNWEIGHTED BASE SIZES**

Extra analysis: Who will be able to afford bills?

The following section draws on data from the qualitative and quantitative phases of Acceptability and Affordability Research, as well as wider research, to understand which customers will genuinely struggle to afford proposed bills.

'Difficult to afford' looks to be more meaningful than 'easy to afford' when trying to understand if charges are affordable or not.

The qualitative research indicated that some customers were reluctant to agree with the **sentiment** that bills would be 'easy' to afford, even if possibly able to afford them: 'easy' does not feel compatible with a general sense of feeling poorer.

Comparing the quantitative data with recent Wessex Water tracking data suggests that % saying 'easy to afford' is significantly lower than % agreeing with the more **literal** question of whether water and sewerage charges are 'affordable'.

Meanwhile 'difficult to afford' is highly comparable with 'disagree' that water and sewerage charges are affordable in the tracking data. For this reason, we suggest that the focus should be on 'difficult to afford' (as a strong proxy for 'not affordable') rather than 'easy to afford', which understates absolute affordability.

Q4. How easy or difficult is it for you to afford to pay your current water and sewerage bill? Base: All HH bill payers

Factors other than simple household income (e.g. size of household, level of water use, extent of other living costs) are likely to be key in whether customers feel genuinely able to afford their water and sewerage bills.

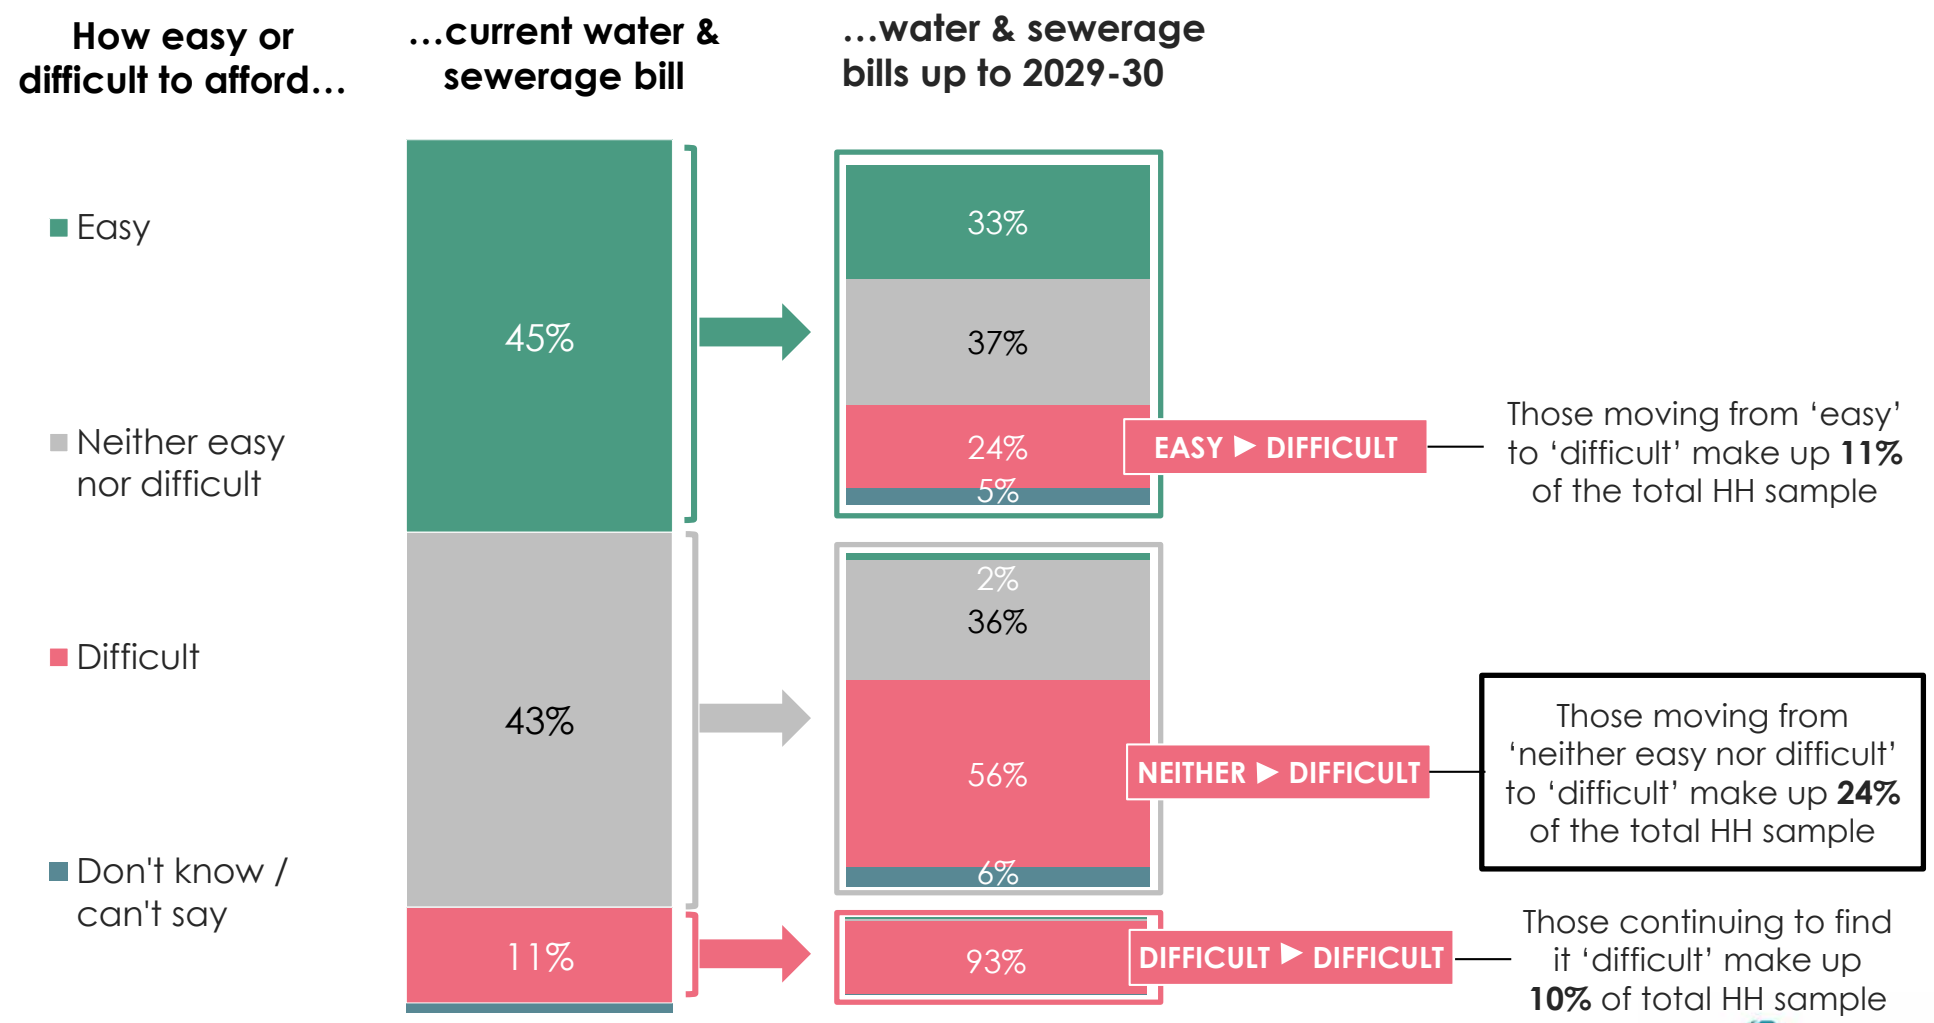

Particularly in the current cost of living context, those with middling incomes, and even some with higher incomes may genuinely struggle to afford their current water and sewerage bills.

While lower household income correlates with finding the bill difficult to afford now, those in higher income brackets can also struggle to afford their current water bills

The key household group driving the increase in unaffordability for future bills is those who currently find the bill neither easy nor difficult to afford.

The group who currently say that the current bill is neither easy nor difficult to afford and then say the future bill will be difficult to afford is a very sizeable proportion of all customers (24%), and a key customer group that is important to understand.

Q4. How easy or difficult is it for you to afford to pay your/your organisation current water and sewerage bill?
 Q5. How easy or difficult do you think it would be for you to afford these water and sewerage bills?
 Base Total household bill payers (1935); **WEIGHTED % FIGURES ARE DISPLAYED and UNWEIGHTED BASE SIZES**

NEITHER ► DIFFICULT

The key set of customers who move from ‘neither easy nor difficult’ to afford the bill now to ‘difficult’ to afford the bill in future are characterised as the squeezed middle who are ‘just getting by’.

In many respects this group of customers is average in profile, but they stand out for saying they are ‘just getting by’ financially, and over-index for ‘middling’ age groups.

		HH customers moving from ‘neither easy nor difficult’ to ‘difficult’ to afford bill (474)	Total HH sample (1935)
Vulnerability in HH	Any	44%	39%
HH managing financially	‘Comfortable/alright’	27%	52%
	‘Just getting by’	60%	32%
	‘Finding it difficult’	9%	10%

A close-up photograph of two people interacting with a silver laptop. One person's hand is pointing at the screen, while the other's hand is on the trackpad. A teal banner is overlaid across the middle of the image with the text 'Business plan components'.

Business plan components

Water supply Performance Commitments – Importance

Reducing leaks is rated the most important of the water supply PCs overall, although those struggling to pay place slightly greater importance on water quality, and a larger minority of NHH customers rate supply interruptions as most important

For detailed stimuli shown to respondents, please see Appendix

Which of these three parts of the business plan is the most important to you: Common Performance Commitments (Water)

(Water and Sewerage customers only)

Reducing leaks

The appearance, taste and smell of tap water

Water supply interruptions, lasting longer than 3 hours

Don't know/Can't say

■ Total (975)

■ Household (746)

■ Vulnerable (305)

■ Struggling (62)

■ NHH (229)

Portsmouth Water **Water supply interruptions, lasting longer than 3 hours**

What does this mean? It would not be possible to draw water from the taps or flush the toilet; it may be necessary to buy bottled water. Sometimes business operations may be affected.

How are Portsmouth Water performing on this? Water companies are measured on the length of time properties are without water. The measure used is the duration without water for more than 3 hours by minutes per property. Portsmouth Water's performance on this measure is currently 2 mins 21 secs. **Portsmouth Water met their target for this metric last year.**

What is the plan for this?

By 2030	Maintain the average time per year properties are without water for more than three hours at the current level.
How will they do it?	<ul style="list-style-type: none"> Portsmouth Water will invest in replacing ageing parts of their network They will invest more in upgrading water treatment works, pumps, and water mains.
Cost on bill	This will add £3.35 to the average annual bill (excluding inflation) by 2030.

FOR YOU. FOR LIFE. **Wessex Water** **Reducing leaks**

What does this mean? Leaks can affect customers directly if their water supply is affected. They are sometimes unnoticed if underground. But leakage is often seen in the media and has a cost to people on their bills and a cost to the environment.

How are Wessex Water performing on this? Water companies are measured on the amount of water lost due to leaks from water mains and pipes. The measure used is annual leakage per property served (litres per day). On average 103 litres of water are lost per property per day in the Wessex Water region. **Wessex Water met their target for this metric last year.**

What is the plan for this?

Benefit by 2030	Reduce the amount lost from 103 to 90 litres per property per day, and so reduce the amount of water Wessex Water need to take from the environment.
How will they do it?	<ul style="list-style-type: none"> Improving the use of data to identify leaks quicker and easier Fixing more leaks in their water pipes.
Cost on bill	This will add £6 to the average annual bill (excluding inflation) by 2030.

Appearance, taste and smell of tap water

What does this mean? Tap water may look or taste/smell different to usual. When you go to drink, people may prefer bottled water until it returns to normal.

How are Wessex Water performing on this? Customers are measured on the number of contacts received regarding the appearance and smell of tap water. The measure used is the number of customer contacts received, per 1,000 population. Wessex Water received 1.17 contacts made to Wessex Water per 1,000 population. **Wessex Water met their target for this metric last year.**

What is the plan for this?

Benefit by 2030	Reduce the number of contacts about the appearance, taste and smell of tap water from 1.17 to 1 per 1,000 population
How will they do it?	<ul style="list-style-type: none"> Better targeting of pipes that need replacing Keeping customers informed about work that might affect the water.
Cost on bill	This will add £2 to the average annual bill (excluding inflation) by 2030.

Q7a. Based on what you have just read, which of these three parts of the business plan is the most important to you?

Base Household and Non household bill payers: Total water and sewerage customers receiving water supply from Wessex Water (975). **WEIGHTED % FIGURES ARE DISPLAYED and UNWEIGHTED BASE SIZES**

Which of these three parts of the business plan is the most important to you? Quantitative data

Performance Commitments – Water
Water and Sewerage customers only (975)

- Water supply interruptions lasting longer than 3 hours
- Reducing leaks
- The appearance, taste and smell of tap water
- Don't know/Can't say

Qualitative insights based on deliberative discussions

- **Supply interruptions:** Agree that this is low priority for improvement
- **Reducing leaks:** Surprise at level of leakage: this PC received the majority of comments
 - Very high priority issue: **question ambition of target**
 - But also the role of customers in paying for company infrastructure

"To reduce by 10l/day isn't very much at all"
HH Taunton

"If it was gas and they lost x amount per day you'd think woah! But because it is water they act like it's fine. It's a precious commodity, it's not to be wasted."
HH Taunton

- **Appearance, taste and smell of tap water:** See as low priority for improvement: perceive current performance is fine
 - Bill impact accepted.

Additional water supply plan components – Importance

Of the three additional water supply plan components, replacing lead pipes has the biggest share of the vote for which is most important, across all the key groups. Installing smart water meters is, by some margin, rated least important for household customers.

Which of these three parts of the business plan is the most important to you: Additional Plan Components (Water)

(Water and Sewerage customers only)

For detailed stimuli shown to respondents, please see Appendix

FOR YOU. FOR LIFE. Installing smart water meters

What does this mean? Smart meters monitor the flow of water into properties. This means there is no need for manual meter readings and that people can see more detail of their water use more regularly to help them save water.

They can also help identify leaks inside homes (e.g. leaking toilets and taps) and from underground water pipes.

What is the current situation? Just over 70% of households in the Wessex Water region have a basic water meter that is read twice a year, but none have a smart water meter.

What is the plan for this?

Benefit by 2030	Reduce water usage and leaks, which reduces the amount of water that has to be taken from the environment by 10 million litres a day, and can save customers money on their bill.
How will they do it?	<ul style="list-style-type: none"> A programme of installing smart meters for all 75% of all properties will have a smart meter by 2030 (490,000 installed).
Cost on bill	This will add £13 to the average annual bill (excluding inflation) by 2030.

FOR LIFE. Replacing lead pipes

What does this mean? Lead was banned as a plumbing material in the 1970s but lead pipes still connect some customers' properties to the water mains. These lead service pipes are jointly owned by customers, and Wessex Water.

What is the current situation? It is estimated that lead pipes affect 100,000 properties in the region (8%). Between 2020-25, Wessex Water will have replaced 9,000 customer-owned lead pipes.

What is the plan for this?

Benefit by 2030	Replace a further 12,000 lead pipes between 2025-30, to reduce the number of customers at risk of exposure to lead traces in their water.
How will they do it?	<ul style="list-style-type: none"> Continuing with further lead pipe replacement Offering a grant to customers if Wessex Water can't replace their lead pipes for any reason
Cost on bill	This will add £2 to the average annual bill (excluding inflation) by 2030.

FOR LIFE. Becoming operationally net zero

What does this mean? Operational net zero means, on balance, does not add any greenhouse gases to the atmosphere through operations that directly controls.

What is the current situation? Wessex Water emit greenhouse gases from their treatment processes.

What is the plan for this?

Benefit by 2030	By 2030 Wessex Water's operations will contribute to climate change.
How will they do it?	<ul style="list-style-type: none"> Switching their vehicles to electric power Increasing renewable electricity use and generating greener electricity on their own sites Reducing energy and chemical use Reducing emissions from treatment processes.
Cost on bill	Based on an example annual bill of £1000 today, this will add £10 to the annual bill by 2030 (excluding inflation).

Q7b. Based on what you have just read, which of these three parts of the business plan is the most important to you?
Base Household and Non household bill payers: Total water and sewerage customers receiving water supply from Wessex Water (975). **WEIGHTED % FIGURES ARE DISPLAYED and UNWEIGHTED BASE SIZES**

Which of these three parts of the business plan is the most important to you? Quantitative data

Additional Plan Components – Water

Water and Sewerage customers only (975)

- Installing smart water meters
- Replacing lead pipes
- Becoming operationally net zero
- Don't know/Can't say

Qualitative insights based on deliberative discussions

- Smart meters:** The most contentious area of the plan with low support for the proposed plan to roll out by 2030 (this was scaled back slightly for the Quantitative phase of research)

 - Customers don't see the benefits *to them* of smart meters
 - Barriers to smart meters: obsessing over usage; adding worry
 - For unmetered, loss of ability to use water 'freely'
 - Unclear about the cost benefit for customers: What saving is likely?
 - Many customers don't link smart meters and leakage (when informed, they question whether leak reduction will lower bills)
- Replacing lead pipes:** Most accept the proposed plan for some enhancement to the lead replacement programme

 - Surprise that there is an issue at all
 - Lead doesn't affect everyone: should those affected pay rather than all?
 - Level of urgency: how great a risk is it (if so serious it would be a legal requirement)?
- Becoming operationally net zero:** While the issue is seen as important, customers find it unacceptable they should pay for Wessex Water to transform its operation to net zero

 - Question the cost of this – appears expensive (when savings should come from reducing emissions)
 - All support the target but many question the approach.

"This is not a good use of our money"
HH Bath

"The health benefits haven't been laboured that much... it doesn't seem as pressing as sewage leakage or pollution"
HH Bath

"I saw a haulage co switching to electric. They are paying for that - so why are we paying Wessex to do the same?"
HH Bath

Sewerage Performance Commitments – Importance

Addressing pollution issues are chosen decisively as the most important of the sewage PCs – 6 in 10 rating it most important of the three. External sewerage flooding is least likely to be rated no.1 importance, behind internal sewerage flooding.

FOR YOU. FOR LIFE.
Wessex Water 0800 783007

Sewage flooding of properties – internal

What does this mean? An escape of sewage inside properties is highly inconvenient, disruptive and a potential health risk. In bad cases, people need to move out of their properties while things are put right.

How are Wessex Water performing on this? Water companies are measured on the incidents of sewage flooding properties. The measure used is the number of properties affected, per 10,000. Wessex Water currently have 1.42 incidents of internal sewer flooding per 10,000 properties.

Wessex Water met their target for this metric last year.

What is the plan for this?

Benefit by 2030	Reduce internal sewer flooding incidents from 1.42 to 1.17 incidents per 10,000 properties.
How will they do it?	<ul style="list-style-type: none"> Raise awareness of what can cause blockages Identify pipes that need to be cleaned or repaired Reduce amount of rainwater entering sewers Invest in new/larger sewers.
Cost on bill	This will add £2 to the average annual bill (excluding inflation) by 2030.

For detailed stimuli shown to respondents, please see Appendix

FOR YOU. FOR LIFE.
Wessex Water 0800 783007

Sewage flooding of properties – external

What does this mean? An escape of sewage into gardens or access points to peoples' properties is inconvenient and unpleasant and can restrict access.

How are Wessex Water performing on this? Water companies are measured on the incidents of sewage flooding gardens or outbuildings. The measure used is the number of properties affected, per 10,000. Wessex Water currently have 19.2 incidents of external sewer flooding per 10,000 properties.

Wessex Water did not meet their target for this metric last year.

What is the plan for this?

Benefit by 2030	Reduce external sewer flooding from 19.2 to 14.5 incidents per 10,000 properties.
How will they do it?	<ul style="list-style-type: none"> Raise awareness of what can cause blockages Identify pipes that need to be cleaned or repaired Reduce amount of rainwater entering sewers Invest in new/larger sewers.
Cost on bill	This will add £2 to the average annual bill (excluding inflation) by 2030.

FOR YOU. FOR LIFE.
Wessex Water 0800 783007

Pollution of rivers and bathing waters

What does this mean? Discharges from sewage works can affect rivers and bathing waters have a minimal effect on the river or effect depending on the scale.

How are Wessex Water performing on this? Water companies are measured on the number of incidents to rivers and streams. The measure used is the number of incidents per 10,000 km of sewer. Wessex Water currently have 20.6 pollution incidents per 10,000 km of sewer.

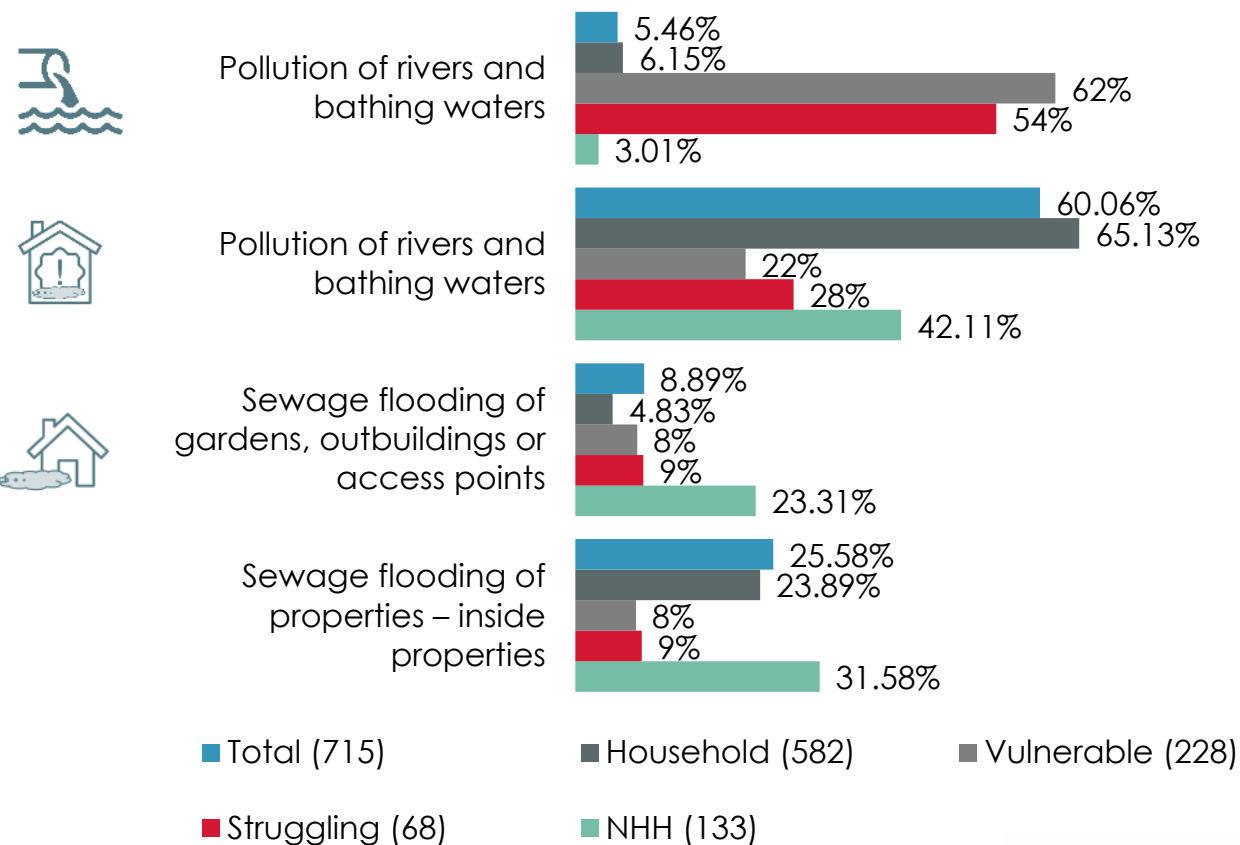

Wessex Water did not meet their target for this metric last year.

What is the plan for this?

Benefit by 2030	Reduce pollution incidents from 20.6 to 10 per 10,000 km of sewer.
How will they do it?	<ul style="list-style-type: none"> Installing more monitors to predict when incidents might occur Using artificial intelligence to improve their response times Cleaning sewers more often to stop problems before they occur.
Cost on bill	This will add £5 to the average annual bill (excluding inflation) by 2030.

Which of these three parts of the business plan is the most important to you: Common Performance Commitments (Sewerage)

(All customers)

Which of these three parts of the business plan is the most important to you? Quantitative data

Performance Commitments – Sewerage

All customers (2373)

- Sewage flooding of properties - inside properties
- Sewage flooding of gardens, outbuildings or access points
- Pollution of rivers and bathing waters
- Don't know/Can't say

Qualitative insights based on deliberative discussions

- **Internal sewer flooding:** Support target: recognise very few are affected/rare events
 - But the bill impact (presented in the qualitative as a single figure with external sewer flooding) looks high

- **External sewer flooding:** Support target: recognise very few are affected/rare events
 - But the bill impact (presented in the qualitative as a single figure with internal sewer flooding) looks high

- **Pollution of rivers and bathing waters:** Important target: many feel it is unambitious
 - Hard to assess measure (per 10k sewer).

“With each target they are asking for more money. How are they looking to work smarter, change the way they currently operate, use technology?”
 HH Bath

Additional sewerage plan components – Importance

Reducing sewage spills (through storm overflows) receives a larger share of the vote than the other plan elements here – reflecting widespread publicity and awareness of this issue.

FOR YOU. FOR LIFE.
Wessex Water

Removing everyone from water poverty

What does this mean? Water poverty is when a household spends more than 5% of its disposable income on the water bill.

What is the current situation? Wessex Water have already given financial support to 55,000 households in water poverty. This is known as a 'social tariff' as the support is paid for through other customers' bills. There are likely to be many more households in the region who need help in the future.

What is the plan for this?

Benefit by 2030
Remove everyone from water poverty by 2030, so all customers will be able to afford their bill.

How will they do it?

- Giving financial support to more customers in water poverty - increasing assistance to help around 100,000 households in total
- Continuing to work with partners such as Citizens Advice
- Making it easier to get support, through automatic bill reductions
- Funding community projects.

Cost on bill
This will add **£24** to the average annual bill (excluding inflation) by 2030 for all those customers not on a social tariff.

For detailed stimuli shown to respondents, please see Appendix

FOR YOU. FOR LIFE.
Wessex Water

Preventing excess nitrogen and phosphorous from entering rivers and sea

Legally required

What does this mean? Large parts of the natural environment in the region have been negatively affected by too much nitrogen and phosphorous entering rivers and seas from industry, wastewater and agriculture.

What is the current situation? There is new legislation to ensure the health of rivers and coastal water environments is restored by reducing the levels of nitrogen and phosphorous.

What is the plan for this?

Restore the quality of rivers and coastal waters by preventing 1,500 tonnes of nitrogen and phosphorous from entering rivers and the sea.

- Installing nitrogen and phosphorous removal technology at Wessex Water's treatment works
- Where they can, work in partnership with farmers and landowners to prevent nitrogen and phosphorous getting washed from the land into rivers and the sea
- Creating wetland areas to naturally absorb nitrogen and phosphorous.

Cost on bill
This will add **£57** to the average annual bill (excluding inflation) by 2030.

FOR YOU. FOR LIFE.
Wessex Water

Reducing sewage spills

Legally required

What does this mean? When there is too much rain to handle, storm overflows allow sewage to escape into a river or the sea.

What is the current situation? Wessex Water have many storm overflows, which, when they spill, help to reduce the quality of water in rivers and seas.

What is the plan for this?

Wessex Water will reduce spills at 148 sites, focusing on sensitive sites to reduce the environmental impact.

How will they do it?

- Increasing storm water storage at sites
- Working with local communities to reduce the rain water entering the sewers
- Building natural solutions like wetlands to provide a form of treatment before it enters the river.

Cost on bill
This will add **£23** to the average annual bill (excluding inflation) by 2030.

Which of these three parts of the business plan is the most important to you: Additional Plan Components (Sewerage)

(All customers only)

Q7d. Based on what you have just read, which of these three parts of the business plan is the most important to you?
Base Household and Non household bill payers: Total (2373). **WEIGHTED % FIGURES ARE DISPLAYED and UNWEIGHTED BASE SIZES**

Which of these three parts of the business plan is the most important to you? Quantitative data

Additional Plan Components – Sewerage

All customers
(2373)

- Removing everyone from water poverty
- Preventing excess nitrogen and phosphorous from entering rivers and sea
- Reducing sewage spills
- Don't know/Can't say

Qualitative insights based on deliberative discussions

- Water poverty:** The large bill impact means there is a cautious response as many are feeling the squeeze.

 - Role of water company vs. state in responding to poverty
 - Unappealing for the 'squeezed middle'
 - Some question the fairness, how eligibility is decided

- Nutrient removal (Legally required):** Lower acceptance of nutrient removal investment as the problem isn't known or understood – and it is unclear what is responsible for this (and therefore who should pay)

 - Expensive bill impact: hard to understand the value / benefit
 - Many accepting however as there is no choice

- Sewage spills (Legally required):** High levels of acceptance (and support) for this investment with only a small number questioning the role of customers in funding it through bills.

 - Awareness of problem and media interest
 - All see as very important and question target: halving by 2050 seems very unambitious
 - Pockets of resistance that this is mandatory (for the customer to pay) but overall high acceptance of the necessity of the investment.

"The squeezed middle are not getting enough help." HH Salisbury

"If it is required, it's required!" HH Bath

"Should we in this day and age, and in this country, should we be discharging sewage into the sea?" HH Bath

A close-up photograph of a person's hand pointing at a laptop screen. Another person's hand is visible on the laptop's trackpad. The person pointing is wearing a black smartwatch. The background is blurred, showing what appears to be a wooden cabinet or desk. A semi-transparent teal banner is overlaid across the middle of the image, containing the text "Acceptability of proposed plans" in white.

Acceptability of proposed plans

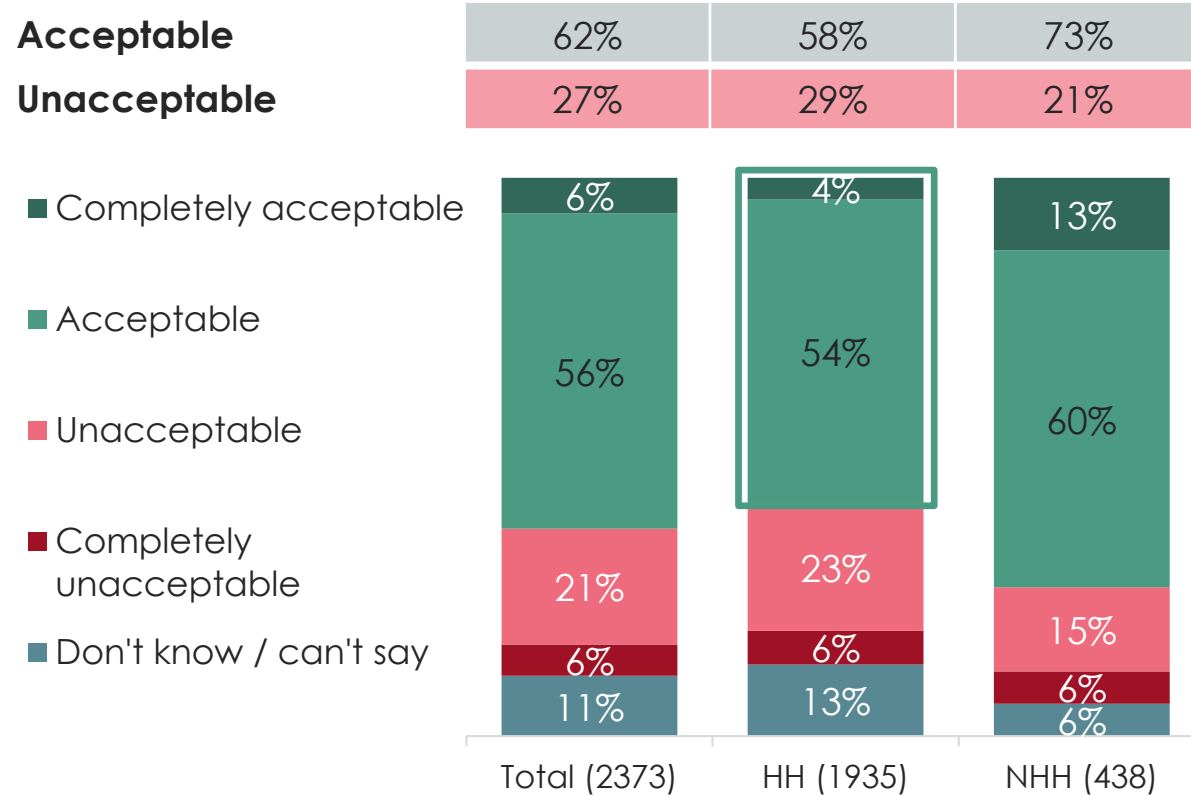

Acceptability of Wessex Water's business plans is 62% overall; slightly lower at 58% for households specifically. This is comparable to the qualitative (26 of 48 household customers)

There is not huge variation in acceptability by various demographic groups, although a correlation between those feeling more financially comfortable and higher acceptability; older age groups are also slightly more favourable than younger

Acceptability of plan (Wessex Water elements only)

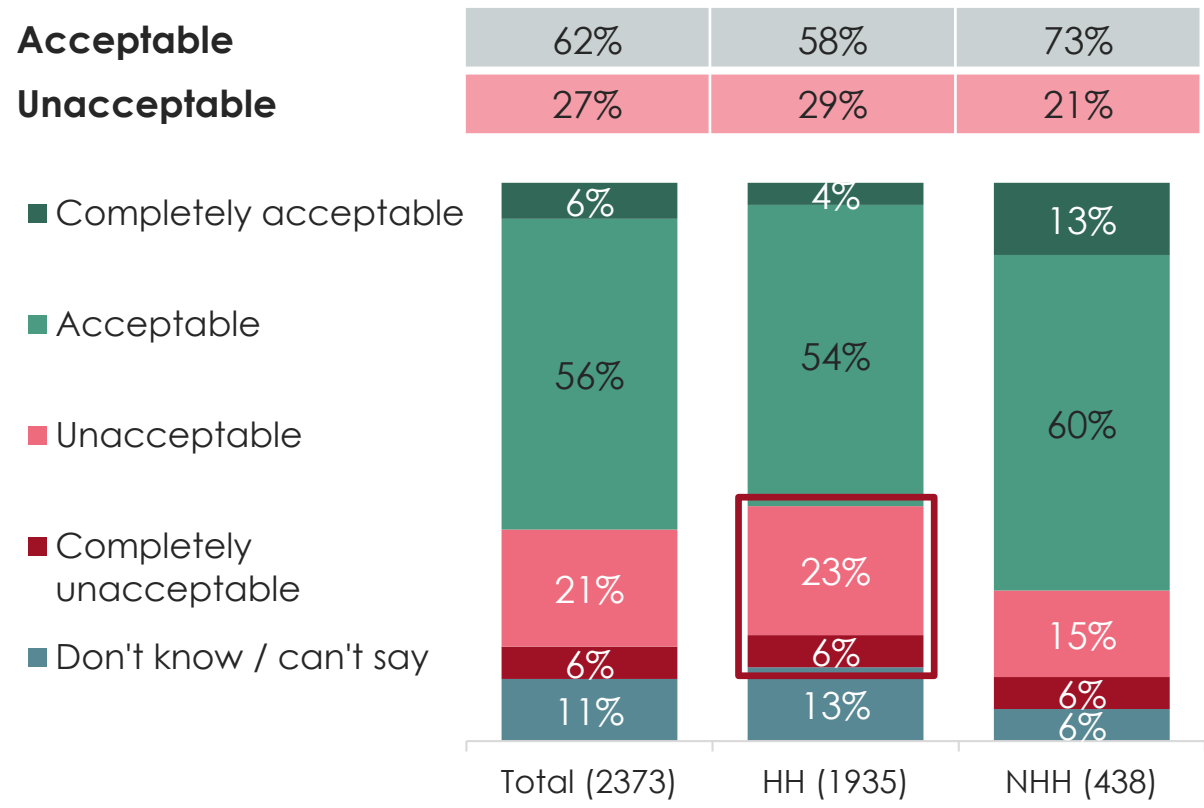

Q8. Based on everything you have seen and read about the proposed business plan, how acceptable or unacceptable is it to you? **Base** Total household and non-household bill payers in the Wessex Water supply area (975) **COMBINED WITH Q10b** Now please think specifically about Wessex Water's proposed plan for sewerage services? **Base** Total household and non-household bill payers in the Bristol Water & Bournemouth Water supply areas (1398) **WEIGHTED % FIGURES and UNWEIGHTED BASE SIZES are displayed**

27% overall think Wessex Water's plans are unacceptable; 29% of household customers. This is comparable to the qualitative findings (16 of 48 household customers found it unacceptable)

Amongst specific household demographic groups, active unacceptability is highest amongst those finding it difficult to manage financially. Younger customers (18-34s) and male customers also record slightly higher levels of unacceptability

Acceptability of plan (Wessex Water elements only)

Plan Unacceptability – Household subgroup differences % of each group who think it is completely unacceptable or unacceptable

Q8. Based on everything you have seen and read about the proposed business plan, how acceptable or unacceptable is it to you? **Base** Total household and non-household bill payers in the Wessex Water supply area (975) **COMBINED WITH Q10b** Now please think specifically about Wessex Water's proposed plan for sewerage services? **Base** Total household and non-household bill payers in the Bristol Water & Bournemouth Water supply areas (1398) **WEIGHTED % FIGURES and UNWEIGHTED BASE SIZES are displayed**

Affordability of the proposed bills has a large impact on business plan acceptability

Future bill affordability has a big impact on accepting the business plan. Nearly 8 in 10 household customers who would find the proposed bills easy to afford say the plans are acceptable, compared to only 47% of the (majority) who say the bills would be difficult to afford.

Acceptability of plan (Wessex Water elements only) – household customers

Q8. Based on everything you have seen and read about the proposed business plan, how acceptable or unacceptable is it to you? **Base** Total household bill payers in the Wessex Water supply area (746) COMBINED WITH **Q10b** Now please think specifically about Wessex Water's proposed plan for sewerage services? **Base** Total household bill payers in the Bristol Water & Bournemouth Water supply areas (1189) **WEIGHTED % FIGURES and UNWEIGHTED BASE SIZES are displayed**

Reasons for accepting the plan were similar to those seen in the qualitative

The key reasons why customer endorse the plan is because the they think it focuses on the right things (for the long term), but relatively few choose positive reasons around value for money / affordability

Reasons for accepting the plan

(Household and Non household customers who found the plans acceptable)

Wessex Water water and sewerage customers commenting on **Wessex Water whole plan**

Wessex Water sewerage-only customers commenting on **Wessex Water & Bristol/Bournemouth Water plans**

Reasons for not accepting the plan revolve around company profits and cost

The main reason for not accepting the business plan is because customers think water companies' profits are too high, that the companies should pay (more) for improvements, and that the bill increases are too expensive

Reasons for not accepting the plan

(Household and Non household customers who found the plans unacceptable)

Wessex Water water and sewerage customers commenting on **Wessex Water whole plan**

Wessex Water sewerage-only customers commenting on **Wessex Water & Bristol/Bournemouth Water plans**

Acceptability of proposed plan for water supply services

Focusing just on the aspects of the Wessex Water plans for water supply services, acceptability (amongst water and sewerage customers) is notably higher than for the plan overall (including both water supply and sewerage elements)

For detailed stimuli shown to respondents, please see Appendix

Wessex Water's plan for <u>water supply</u> services 2025-30	
These are key elements of Wessex Water's business plan only, and do not make up the full set of activities or costs.	
By 2030...	£/yr
Continue to meet the current target for duration properties are without water	£0
Reduce leakage from 103 to 90 litres per property per day	£6
Reduce contacts about appearance, taste and smell of tap water from 1.17 to 1 per 1,000 population	£2
Install smart water meters in 75% of properties	£13
Replace 12,000 customer lead pipes	£2
Become operationally net zero	£6
£/yr means the added amount on to the average current annual bill (excluding inflation) by 2030	
Note: None of these elements are legally required	

Wessex Water's plan for <u>water supply</u> services 2025-30	
These are key elements of Wessex Water's business plan only, and do not make up the full set of activities or costs.	
By 2030...	£/yr
Continue to meet the current target for duration properties are without water	£0
Reduce leakage from 103 to 90 litres per property per day	£13
Reduce contacts about appearance, taste and smell of tap water from 1.17 to 1 per 1,000 population	£4
Install smart water meters in 75% of properties	£29
Replace 12,000 customer lead pipes	£5
Become operationally net zero	£10
£/yr means the added amount (excluding inflation) on to an example current annual bill of £1,000 by 2030.	
Note: None of these elements are legally required	

How acceptable or unacceptable is the business plan for the water supply services?

(Water and Sewerage customers only)

Acceptability of proposed plan for sewerage services

Focusing on the sewerage services aspects of the Wessex Water plans, acceptability is lower than for the water only plan. Sewerage elements (with notably higher costs attached than water supply) may be holding back overall acceptability

For detailed stimuli shown to respondents, please see Appendix

Wessex Water's plan for sewerage services 2025-30	
These are key elements of Wessex Water's business plan only, and do not make up the full set of activities or costs.	
By 2030...	£/yr
Reduce indoor sewer floods from 1.42 to 1.17 per 10,000 properties	£2
Reduce outdoor sewer floods from 19.2 to 14.5 per 10,000 properties	£2
Reduce pollution incidents from 20.6 to 15.7 per 10,000km of sewer	£5
Remove everyone from water poverty	£24
Prevent excess nitrogen and phosphorous entering rivers & sea <i>(Legally required)</i>	£57
Reduce sewage spills at 148 sites, focusing on sensitive sites <i>(Legally required)</i>	£23
£/yr means the added amount on to the average current annual bill (excluding inflation) by 2030	

Wessex Water's plan for sewerage services 2025-30	
These are key elements of Wessex Water's business plan only, and do not make up the full set of activities or costs.	
By 2030...	£/yr
Reduce indoor sewer floods from 1.42 to 1.17 per 10,000 properties	£5
Reduce outdoor sewer floods from 19.2 to 14.5 per 10,000 properties	£5
Reduce pollution incidents from 20.6 to 15.7 per 10,000km of sewer	£12
Remove everyone from water poverty	£0
Prevent excess nitrogen and phosphorous entering rivers & sea <i>(Legally required)</i>	£137
Reduce sewage spills at 148 sites, focusing on sensitive sites <i>(Legally required)</i>	£55
£/yr means the added amount (excluding inflation) on to an example current annual bill of £1,000 by 2030.	

How acceptable or unacceptable is the business plan for the sewerage services?

(All customers)

A close-up, high-angle shot of water flowing from a black faucet. The water is captured in a series of frames, creating a sense of motion and texture. The background is a soft, out-of-focus grey. A semi-transparent teal banner is overlaid across the middle of the image, containing the word "Summary" in white text.

Summary

Easy to afford bill now

Would be easy to afford future bill

Plan Acceptability

1

Customers' perceptions of their economic situation is similar in both the qualitative and quantitative phases of research: Only a minority of customers feel that they are 'comfortable' financially and the outlook is pessimistic - more customers think that the situation will get worse over the next few years than think it will get better.

2

Despite the financial squeeze, only a minority (10%) find it difficult to afford their current water & sewerage bill. However, when presented with proposed future bills, the proportion who will find it difficult to afford jumps to over 4 in 10. Qualitative discussions showed customers were surprised by the extent of the bill increases, which were unexpected.

3

The qualitative research also revealed a nuanced picture on customers' responses around plan affordability. Their answers to the affordability question (reluctance to answer 'easy to afford') can to some extent reflect a lack of their willingness to pay for investments as opposed to their inability to pay. There's particular reluctance in contributing to what are seen as 'business as usual' investments (e.g. operational net zero).

4

The quantitative data shows the majority of customers moving to the view that proposed future bills will be difficult to afford are those who find their current bill 'neither easy nor difficult' to afford. A high proportion of these say that they are 'just getting by' - and many are in middling income brackets. The 'squeezed middle' look to be genuinely concerned that future bills will not be affordable to them, along with those who already struggle to afford.

5

Acceptability of the proposed business plan at both the qualitative and quantitative stages was similar. Overall, 63% of customers accept the plan in the quantitative research (59% of household customers). This level of acceptability is lower than typical levels seen in previous price reviews, and is heavily influenced by how affordable they find the proposed bills

6

Lack of acceptance of the plans for PR24 revolves around the (linked) issues of the cost of the plan and a (growing) sense that water companies' profits are too high, and that they should be paying for more of the investments.

A high-angle photograph of two people in a meeting. One person, wearing a blue shirt and a black watch, is pointing with a black pen at a document on a table. The other person, wearing a black and white striped shirt, has their hand on another document. The documents feature various data visualizations, including bar charts, line graphs, and infographics. One infographic is titled 'COMPETITIVE ANALYSIS' and shows a bar chart with '80%' highlighted. Another is titled 'INFOGRAPHIC' and shows a map of Europe with numbered markers (1, 2, 3) and a bar chart. A third document shows a bar chart with '75%' and a line graph with '+120'.

Appendices

A photograph showing two people in a meeting. One person, wearing a blue shirt and a black watch, is pointing with a black pen at a document on a table. The other person, wearing a black and white striped shirt, is also looking at the document. The table is covered with several documents featuring various data visualizations, including bar charts, line graphs, and infographics. One prominent infographic is titled 'COMPETITIVE ANALYSIS' and shows a bar chart with a value of 80%. Another document shows a bar chart with a value of 75%. The overall scene suggests a collaborative business meeting focused on data analysis.

STIM_1A_WessexWater_Households

**Water supply interruptions,
lasting longer than 3 hours**

What does this mean? It would not be possible to draw water from the taps or flush the toilet; it may be necessary to buy bottled water. Sometimes business operations may be affected.

How are Wessex Water performing on this?
Water companies are measured on the length of time properties are without water. The measure used is the duration without water for more than 3 hours by minutes per property.
Wessex Water's performance on this measure is currently 4 minutes and 12 seconds.
Wessex Water met their target for this metric last year.

What is the plan for this?

Benefit by 2030	The length of time properties are without water will continue to meet the current target of 5 minutes.
How will they do it?	<ul style="list-style-type: none"> Maintain current level of investment in the water supply network.
Cost on bill	This will not add anything to your annual bill above what you pay today.

STIM_1A_WessexWater_NonHouseholds

Reducing leaks

What does this mean? Leaks can affect customers directly if their water supply is affected. They are sometimes unnoticed if underground. But leakage is often seen in the media and has a cost to people on their bills and a cost to the environment.

How are Wessex Water performing on this?
Water companies are measured on the amount of water lost due to leaks from water mains and pipes. The measure used is annual leakage per property served (litres per day).
On average 103 litres of water are lost per property per day in the Wessex Water region.
Wessex Water met their target for this metric last year.

What is the plan for this?

Benefit by 2030	Reduce the amount lost from 103 to 90 litres per property per day, and so reduce the amount of water Wessex Water need to take from the environment.
How will they do it?	<ul style="list-style-type: none"> Improving the use of data to identify leaks quicker and easier Fixing more leaks in their water pipes.
Cost on bill	This will add £6 to the average annual bill (excluding inflation) by 2030.

Installing smart water meters

What does this mean? Smart meters monitor the flow of water into properties. This means there is no need for manual meter readings and that people can see more detail of their water use more regularly to help them save water.

They can also help identify leaks inside homes (e.g. leaking toilets and taps) and from underground water pipes.

What is the current situation? Just over 70% of households in the Wessex Water region have a basic water meter that is read twice a year, but none have a smart water meter.

What is the plan for this?

Benefit by 2030	Reduce water usage and leaks, which reduces the amount of water that has to be taken from the environment by 10 million litres a day, and can save customers money on their bill.
How will they do it?	<ul style="list-style-type: none"> A programme of installing smart meters for all 75% of all properties will have a smart meter by 2030 (490,000 installed).
Cost on bill	This will add £13 to the average annual bill (excluding inflation) by 2030.

Sewage flooding of properties – external

What does this mean? An escape of sewage into gardens or access points to peoples' properties is inconvenient and unpleasant and can restrict access.

How are Wessex Water performing on this? Water companies are measured on the incidents of sewage flooding gardens or outbuildings. The measure used is the number of properties affected, per 10,000. Wessex Water currently have 19.2 incidents of external sewer flooding per 10,000 properties. **Wessex Water did not meet their target for this metric last year.**

What is the plan for this?

Benefit by 2030	Reduce external sewer flooding from 19.2 to 14.5 incidents per 10,000 properties.
How will they do it?	<ul style="list-style-type: none"> • Raise awareness of what can cause blockages • Identify pipes that need to be cleaned or repaired • Reduce amount of rainwater entering sewers • Invest in new/larger sewers.
Cost on bill	Based on an example annual bill of £1000 today, this will add £5 to the annual bill by 2030 (excluding inflation).

STIM_8B_WessexWater_HH+NHH

How do water companies perform on the incidents of sewage flooding gardens or outbuildings?

The measure used is the number of properties affected by sewage flooding gardens or outbuildings, per 10,000.

Companies with the *lowest* numbers perform best for this service.

Wessex Water perform 7th out of 11 companies overall on this measure:

	No. properties affected per 1,000
Thames Water	9.4
Severn Trent Water	10.8
Anglian Water	14.6
United Utilities	18.1
South West Water	18.1
Hafren Dyfrdwy	19.1
Wessex Water	19.2
Yorkshire Water	19.5
Southern Water	19.5
Dwr Cymru	26.3
Northumbrian Water	26.6

Better performance ↑
Worse performance ↓

Only the companies that provide sewerage services are included in this comparison

STIM_9A_WessexWater_Households

Pollution of rivers and bathing waters

What does this mean? Discharges from sewage treatment or networks can affect rivers and bathing waters. This can have a minimal effect on the river ecology or a major effect depending on the scale.

How are Wessex Water performing on this? Water companies are measured on the number of incidents of pollution of rivers and streams. The measure used is number of incidents per 10,000 km of sewer. Wessex Water currently have 20.6 pollution incidents per 10,000 km of sewer.

Wessex Water met their target for this metric last year.

What is the plan for this?

Benefit by 2030	Reduce pollution incidents from 20.6 to 15.7 per 10,000 km of sewer.
How will they do it?	<ul style="list-style-type: none"> Installing more monitors to predict when incidents might occur Using artificial intelligence to improve their response times Cleaning sewers more often to stop problems before they occur.
Cost on bill	This will add £5 to the average annual bill (excluding inflation) by 2030.

STIM_9A_WessexWater_NonHouseholds

Removing everyone from water poverty

What does this mean? Water poverty is when a household spends more than 5% of its disposable income on the water bill.

What is the current situation? Wessex Water have already given financial support to 55,000 households in water poverty. This is known as a 'social tariff' as the support is paid for through other customers' bills. There are likely to be many more households in the region who need help in the future.

What is the plan for this?

Benefit by 2030	Remove everyone from water poverty by 2030, so all customers will be able to afford their bill.
How will they do it?	<ul style="list-style-type: none"> Giving financial support to more customers in water poverty - increasing assistance to help around 100,000 households in total Continuing to work with partners such as Citizens Advice Making it easier to get support, through automatic bill reductions Funding community projects.
Cost on bill	This will add £24 to the average annual bill (excluding inflation) by 2030 for all those customers not on a social tariff.

Preventing excess nitrogen and phosphorous from entering rivers and sea

Legally required

What does this mean? Large parts of the natural environment in the region have been negatively affected by too much nitrogen and phosphorus entering rivers and seas from industry, wastewater and agriculture.

What is the current situation? There is new legislation to ensure the health of rivers and coastal water environments is restored by reducing the levels of nitrogen and phosphorous.

What is the plan for this?

Benefit by 2030	Restore the quality of rivers and coastal waters by preventing 1,500 tonnes of nitrogen and phosphorous from entering rivers and the sea.
How will they do it?	<ul style="list-style-type: none"> Installing nitrogen and phosphorus removal technology at Wessex Water's treatment works Where they can, work in partnership with farmers and landowners to prevent nitrogen and phosphorous getting washed from the land into rivers and the sea Creating wetland areas to naturally absorb nitrogen and phosphorous.
Cost on bill	This will add £57 to the average annual bill (excluding inflation) by 2030.

STIM_12_WessexWater_Households

Reducing sewage spills

Legally required

What does this mean? When there is too much rainfall for sewers to handle, storm overflows allow rain water, mixed with sewage, to escape into a separate pipe which eventually flows into a river or the sea.

What is the current situation? Wessex Water have 1,300 storm overflows, which, when they spill, help reduce the risk of properties being flooded with sewage. Longer-term targets have been set by government to reduce the use of storm overflows.

What is the plan for this?

Benefit by 2030	Wessex Water will reduce spills at 148 sites, focusing on sensitive sites to reduce the environmental impact.
How will they do it?	<ul style="list-style-type: none"> Increasing storm water storage at sites Working with local communities to reduce the rain water entering the sewers Building natural solutions like wetlands to provide a form of treatment before it enters the river.
Cost on bill	This will add £23 to the average annual bill (excluding inflation) by 2030.

A photograph showing two people in a meeting. One person, wearing a blue shirt and a black watch, is pointing with a black pen at a document on a table. The other person, wearing a black and white striped shirt, is looking at the document. The table is covered with several documents featuring various data visualizations, including bar charts, line graphs, and infographics. One document prominently displays '80%' and 'COMPETITIVE ANALYSIS'. Another document shows '75%' and 'INFOGRAPHIC'. The scene is brightly lit, suggesting an office or conference room environment.

Appendix 3 – Technical and assurance

Addressing Ofwat's research principles – quantitative

Standards for high-quality research:	How addressed in this project:
Useful and contextualised	This forms part of the PR24 research requirement, and we followed the guidance throughout. Respondents were recruited via both email and letter. Both contained a link to the survey; provisions were also made to ensure that those who preferred to complete the survey on paper could easily apply to do so.
Fit for purpose	<ul style="list-style-type: none">• We followed Ofwat guidance throughout to ensure both the research sample and methodology were fit for purpose. We challenged some elements of the guidance (around visual presentations of performance, for instance) where we felt improvements could be made.• The survey was run and managed by QRS, an independent market research agency. Individual responses are confidential and not identifiable to Wessex Water. The invitations were sent to a randomly drawn selection of customers from Wessex Water's overall customer database with minimal exclusions. The response rate was good, resulting in a robust base size of over 2,300 respondents, enabling robust analysis of the key subgroups of interest. While we recognise that the sample was self-selecting, with no quotas imposed, good subsamples of all demographic groups were achieved, and weighting was applied to the data to compensate for the demographic skew in the unweighted total (see Method section)
Neutrally designed	Blue Marble followed Ofwat's prescribed questionnaire design as per Appendix F of the Ofwat guidance with only minor amendments as agreed with the CCG. The quantitative survey used balanced answer lists, randomised answer lists and gave options to say 'don't know' as prescribed by Ofwat's guidance .
Inclusive	The report reflects a wide range of perspectives by including the views of household, non-household customers and specifically households with vulnerabilities and those who are financially struggling. The survey invitation was sent to a random sample of 10,800 household customers, of which c. 7% elected to respond. Robust subsamples of a wide range of customer types and segments were achieved, including younger and older age groups, all social grades and customers with vulnerabilities.
Continual	Wessex Water to advise
Shared in full	Wessex Water to advise
Ethical	Blue Marble is a company partner of the MRS, senior team members are all Members of the MRS and/or SRA. All Blue Marble's employees abide by the MRS Code of Conduct and as such all our research is in line with their ethical standards.
Independently assured	Mott MacDonald audit (Wessex Water to add detail)
